The demo v11 database and web site illustrates many key Active4D techniques. If you do not own 4D v11, you can download it and run it in demo mode.

To run the demo:

1. If you want to use 4D's built in web server, copy the Active4D and InternetCommands plugins (or links to them) into the Active4D-demo.4dbase/Plugins folder. If you want to use NTK as the web server, copy the Active4D and NTK plugins (or links to them) into the Active4D-demo-NTK.4dbase/Plugins folder.
2. Open the demo database (Active4D-demo.4dbase or Active4D-demo-NTK.4dbase).
3. Open a browser and enter "http://localhost:8080".
4. Explore the techniques.
5. Click the "Demo->Login" link at the bottom of the left sidebar. The username is "tinytim", the password is "tulips".
6. Click the "List ingredients" link.
7. Enter "b*" in the Search field and click Search to show all ingredients that begin with the letter 'b'.
8. Click on an ingredient name to edit the ingredient.

Poke around in the demo and take a look at the underlying code. If you have questions, feel free to join the Active4D mailing list and ask questions.
