Dynamic Stream Class 1.1.0.10

This ActionScript® 3.0 class is the fastest way to help improve experiences through multi-bitrate delivery. This class includes algorithms that provide the best available bitrate monitoring and transitions that are easy to use and deploy. You can use these classes with Adobe® Flash® CS4 Professional, Adobe Flex® 3, or the Flex SDK.

This sample code can be used in Windows, Linux, or Mac OS.

The following bugs are fixed in this version:

2504913	DynamicStream class should self correct if one of the streams cannot be found.
2502091	Dynamic Streaming class could end up in a cascade fall to the lowest bitrate under certain circumstances.
2502030	Client object assignment failed in the Dynamic Streaming class.
2502018	Dynamic Streaming transitions stopped working after a seek.
2490446	When playing multi-bitrate DVR streams from an Edge server only the media in lowest bit rate played and never switched to the higher bitrates though the client had enough bandwidth.
