Adobe® Audition™ 3.0 SDK

The Adobe Audition 3.0 SDK provides samples of three public APIs:

FLT : File format support. AU wave file format support provided.

CV2 : Hardware controller support. Generic device control.

SSF : Multitrack session file format. XML sample provided

The XFM audio filter API has been removed from the Adobe Audition SDK. While XFM filters are still supported in Adobe Audition 3.0, we do not recommend or support further 3rd-party development of XFM plug-ins. Instead, we recommend developers create plug-ins based on Steinberg VST or Microsoft DirectX. VST plug-ins will also be compatible with Adobe Premiere Pro.

The sample projects have been updated to compile in Microsoft Visual Studio .NET 2003; though they will still compile in older versions, obsolete projects are no longer included.

THANK YOU!

Thanks for developing for Adobe products! We want to provide the best support possible for Audition developers; let us know how we can do better.
