

Bichronizer Product Description

Background

Bichronizer is a computer application designed and developed in Uganda that allows you to easily countdown time to events with fun. You can countdown to special big events like anniversaries, birthdays, weddings, and also simple events like lunch appointments and meetings. The application continuously displays on your screen the updated remaining days, hours, minutes, and seconds to the event, and a working clock. The application allows you to customize most of its features. You specify the event name, date and time. The application also allows you to personalize the look and feel of the displayed information including the displayed clock. For the clock, you choose the colors for the clock circle, face, numbers, *hands*

(hour, minute and seconds). You can also choose a background photo from your own collection. Once you do this, the application will keep these preferences (even when you switch off your computer) until you change them again. You can choose to have *bichronizer* always displayed on top of the screen or be covered by other applications as you use the computer. Interestingly, the application can also count up!

System Requirements

Bichronizer requires the following to run efficiently:-

Desktop personal computer or laptop
