Professional Documents
Desktop Publishing
Electronic Forms
and more!

Are you ready for a new experience in word processing? We know you've heard it all before - products claiming to be the best on the market. Or the easiest to use. Or the fastest. Or having the most features. Wouldn't it be nice to find one that actually lived up to it's billing?

If you are tired of all the hype, our Breeze Designer Suite may be just what you've been searching for. We don't claim that it is the best, or that it has the most features, and there is a possibility that it may not even be the fastest on the market. What we will claim however, is that you don't have to be a rocket scientist to get professional quality results from Breeze. And it doesn't require weeks of training to achieve those results either. Most users will be able to familiarize themselves with the program interface within minutes. Some of the advanced features may take a little longer to master, but within the first couple of hours or so, you will be able to design and start using professional looking documents, advanced electronic forms, and more.

Click the links below to explore a few of the easy to use features found in the Breeze Designer Suite.

Breeze compared to the market leaders
A sampling of features found in Breeze
More than one way to print
Breeze in action
Creating electronic forms in Breeze
Create Mailing Labels and Business Cards
Desktop Publishing
Designing flow charts, organization charts and diagrams
How to order the Breeze Designer Suite CD

Market Leaders

MS Word® is probably one of the most feature rich programs for word processing on the market. It has dominated the word processing arena for years. Yet for all its power, most people only use 8 percent of its features. Why? A lot of those features are simply too difficult for the average person to master without extensive training. OpenOffice is another software package that has a powerhouse word processing unit called Writer. Again, it is loaded with a multitude of features that can be too difficult for the average person to master without extensive training.

For corporations who have the money to spend, getting their staff trained in the operation of software is not a problem. For small business interests or the home user, extensive training is simply out of the question. Let's face it, most of us don't have either the time or the money to spend to become experts in word processing when all we do is write the occasional letter. Still, it would be nice to be able to produce professional looking documents and forms without having to go back to college just to accomplish these simple tasks.

Most small business people and many home users need to create headers and footers for their documents. As long as you aren't placing any graphics in the header or footer, almost all word processing programs will let you perform this simple task with a minimum of effort. As soon as you try to place a graphic in there, things get complicated. The text formatting seems to go out the window.

Another task that has caused countless hours of frustration is simply applying a watermark to your documents. Try to stamp your document with 'Draft Copy' in OpenOffice and let us know how you fare! Sure, you can change the background color easily or apply a graphic. But how about applying a simple text stamp to show your document isn't ready for final printing. It just can't be done as of version 2.0.3. Word will let you add a text stamp but makes you jump through hoops to accomplish that one simple task and often with very mixed results.

Now there is a way for those of us who aren't necessarily experts in the field of word processing to produce professional looking documents. Breeze has been designed to accomplish complex tasks with a minimum of fuss. You can easily design multiple headers and footers for your documents. Once you have a header or footer designed, you can save that header or footer to disk and simply load it later when you need it!

Applying text watermarks or using a logo watermark is easily accomplished with Breeze. After you have selected your default company logo on the setup page (Tasks->Options), you can apply a logo watermark by simply selecting 'Logo' from the drop-down list on the main page. Need a text watermark? Just select one of the presets from the drop-down list or type in what you want to use as a stamp. It will be applied immediately to your document so you can instantly see the results!

Table Lock

If you use tables in your documents very often, more likely than not you know exactly what we are referring to. And it usually happens at the most in-opportune moment.

Just about every modern word processor allows you to insert tables. They are a lot faster to use than setting left, center and right aligned tabs for each row where you need to format data. The problem with trying to use tabs is that they don't allow for word wrapping in a specified column. That's why we use tables instead.

The frustration comes in after you have been working on a document and you decide to insert a table at the end of your current text. The table inserts just fine. After you fill in the columns and rows with your data, you decide you need to add a paragraph below the table. That's where table lock comes in! If you don't have text (or at a least blank line) below the table position, you just can't get out of the last row of your carefully formatted table. If you are like most of us, you have experienced this problem. 'Old Pros' know to hit the enter key a couple of times before we move the cursor back up to where we want the table. That prevents table lock because we'll have a blank line or two at the end of the document. On occasion though, even old pros forget to add the blank lines.

While we were creating this program and going through the testing phase, we ran into that exact same problem with Breeze. So we fixed it! We added a menu short cut and a toolbar button to get you out of those situations. How does it work? Simple - the command tells Breeze to add a blank paragraph at the end of the current document. After you add the blank paragraph, you simply click the line below your table and no more table lock! Why didn't someone think of this simple solution before?
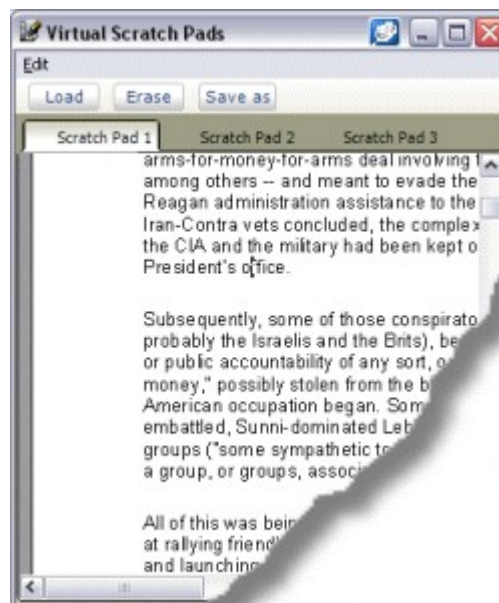

Clipboards

Unlike the market leaders, Breeze keeps track of the last 16 items you have placed on the clipboard. And Breeze remembers your clipboard data between different sessions! In most programs, if you copy 9 or 10 different items to the clipboard during an editing session and then shut down your computer - those items will be gone forever when you start up your computer again. With Breeze, all those items will still be available during your next editing session. Select any of the available clipboards and Breeze will show you exactly what is held there before you paste. The clipboard monitoring feature can be turned off if you desire.

NotePads

On occasion you need a place to jot down a quick note or a thought that has come to you while you are working on your documents or letters. Or you may decide that the last paragraph you typed should be placed later in your document. One way to do this of course is to open up Notepad and write down your thoughts there, or cut the paragraph to NotePad and paste it later. The problem with this is that all your formatting will be lost when you paste it back. Breeze offers you a solution to this problem - Virtual Scratch Pads. Drag & Drop or Cut, Copy and Paste between the main document editor window and any of the 3 available scratch pads. Use the scratch pads as spare clipboards or as repositories for items you want to save. The virtual scratch pads can be used as mini-editors! Any thing that is on each of the scratch pads will be remembered and saved for re-use the next time you start the Breeze program. Our Virtual Scratch Pads can also be used to load Breeze documents (bzd, bzdt, and bzid files), Richtext (rtf files) and Text files from disk. With the addition of our Virtual Scratch Pads, you can have up to 4 documents open at the same time (including the one open in the main document editor)! The "Stick Pin" icon at the top of the window will let you determine if this window should always be placed on top of the main window or not.

Drop Caps

B reeze can't create Drop Caps like MS Word, but Breeze can easily create 'TextArt' graphics from your selected text that work just as well and give you more options. Such as standard and gradient shadows, shadow color, depth of shadow and surround. The 'TextArt' graphics are created as Windows Enhanced Metafiles (emf files). Just right click anywhere in your document and select 'Create TextArt' from the popup menu. If you have text selected, Breeze will automatically enter that in the 'TextArt' window to get you started. See the next page for details.

TextArt

Breeze doesn't have the ability to create fancy WordArt but we have a feature that is very close to it. Breeze allows you to create TextArt from any selected text or text that you enter in the TextArt window itself. You are limited to a maximum of 2 lines for each TextArt graphic that you create. Below is a screen shot of Breeze creating a 3D graphic from text we had selected inside the main window.

And here is our text after it has been converted to a *TextArt* graphic for an article. The original text we had selected was automatically replaced by our TextArt graphic.

A Journalist Writing Bloody Murder...
And No One Notices

Let me see if I've got this straight. Perhaps two years ago, an "informal" meeting of "veterans" of the 1980s Iran-Contra scandal -- holding positions in the Bush administration -- was convened by Deputy National Security Advisor Elliott Abrams. Discussed were the "lessons learned" from that labyrinthine, secret, and illegal arms-for-money-for-arms deal involving the Israelis, the Iranians, the Saudis, and the Contras of Nicaragua, among others -- and meant to evade the Boland Amendment, a congressionally passed attempt to outlaw Reagan administration assistance to the anti-communist Contras......

Breeze lets you save your documents in rtf, text, our own bzd (Breeze Document) format and in the universal pdf format. While Breeze was designed for simplicity, that doesn't mean you wont find advanced features readily available when you need them.

A few of the advanced features are listed below:
- Password protection available for files saved in Breeze formats.
- Ability to add, edit, delete and use styles for your paragraphs.
- Create form fields with the ability to limit the amount of text that can be entered.
- Use text and paragraph highlighting.
- Spell Checking and Thesaurus.
- Insert tables and nested tables.
- Load from html files.
- Automatic hyperlink detection as you type.
- Embedded graphics.
- Insert navigation Bookmarks which work inside Breeze, Richtext and PDF files.
- WYSIWYG editing (What You See Is What You Get).
- N-Up Printing - 1 up, 2 up, 4 up and Booklet style printing.
- Zoom in or out while you are in edit mode.
- Advanced horizontal and vertical rulers.
- Align graphics in your text to the page or paragraph, with text wrapping or without text wrapping, over text or under text (as watermark).
- Create and print Documents, Forms, Mailing Labels, Business Cards or Envelopes.
- Create advanced, self-calculating electronic forms to save you time and paper.
- Over 600 form and document templates to get you started.
- Companion 'Breeze Doc' program that you can distribute to your employees to use when they need to fill out one of your documents that have '*form fields*'. Only the areas you designate as a '*field*' can be changed in those documents.
- Your documents can be saved as **PDF** files without Adobe® or other third party software installed on your computer!

Breeze allows you to insert images inside your text and specify how or if the text should wrap around the object. Just right click on the image and select one of the options. The image you see to the left in this paragraph is set to 'Anchor to Paragraph - auto wrap'.

You aren't limited to one anchored graphic in a paragraph either. On the left of this paragraph, you see a smaller graphic that is set to 'Anchor to Paragraph - Wrap text on right'. When your paragraph gets large enough it will expand back to the normal dimensions you have set for the current page.

N-Up printing options.

Breeze gives you the option to print your documents 1-Up, 2-Up, Booklet style (2-Up) or 4-Up per page to save paper. You can also opt to print All pages, Odd numbered pages only or Even numbered pages only. Save individual pages as emf files. Previews in 2-Up mode can be set to maintain aspect ratio or stretched to fill available area. Optional dividing border to help separate pages. Our Booklet style printing option uses a complex algorithm to print your documents 2-Up, double sided to cut your paper costs even further. For example, if your document is 200 pages long, Breeze's 'Booklet' style printing will only require 50 sheets of paper!

Booklet output gives you either side fold or tent style fold depending upon the original orientation of your document. After Breeze prints your document in 'Booklet' style, all you have to do is pick up the printed sheets, fold them in half, and your booklet is ready for reading. The pages will already be in the correct order!

Booklet style printing is perfect for mailing out small flyers or brochures to your clients.

Breeze in Action

Here is a screen shot of the Breeze Document Designer working on this document. As you can see from this image, you know exactly where your page breaks are going to be. Zoom in or out, view multiple pages at once, or switch to normal mode where page breaks are shown as a dotted line. If you desire, you can even turn on a 'Gutter' and/or show thumbnail images of each page in your document. The 'thumbnail image' view shown along the right edge of the window is an option that can be turned on and off. It is off by default (View->Thumbnail Window). The thumbnails allow you to quickly scroll to the page you want and select it by simply clicking on the desired thumbnail image.

Industry standard 'Hot Keys' let you work with your documents using the same key combinations found in your old word processor. Breeze supports bulleted lists, numbered lists, horizontal lines, hyperlinks, tables, styles and bookmarks. Breeze also supports Spell Checking and includes a Thesaurus.

Breeze works on any Windows operating system from Win95 up to WinXP.

Here is a screen shot of the Header/Footer Manager found in Breeze working with this document. The manager makes it easy to save and reload headers and/or footers when you need them. As you can see from the image to the right, you aren't limited to only one header or footer per document.

Advanced Forms

Do you need the ability to create advanced interactive, self-calculating forms? Most word processors fall down on the job in this respect. When you need more complex forms than what you can accomplish in word processor mode, switch over to the '*Form Designer*' screen and create what you want! Layout your fields, text and images anywhere you want them. After forms are designed and saved to disk, they will open in the companion 'Breeze Form' program which operates as a *form filler* - only field information can be changed, all other text and images are protected! You can freely distribute the 'Breeze Form' program to your employees or customers so they can fill out the forms you create! The completed form information can be exported to csv format so you can easily keep track of sales information, applications, or anything else you design. The completed forms can also be saved as (non-interactive) PDF files, jpg, emf, wmf, gif and bmp graphics. A Breeze form can do things that plain old paper forms can't!
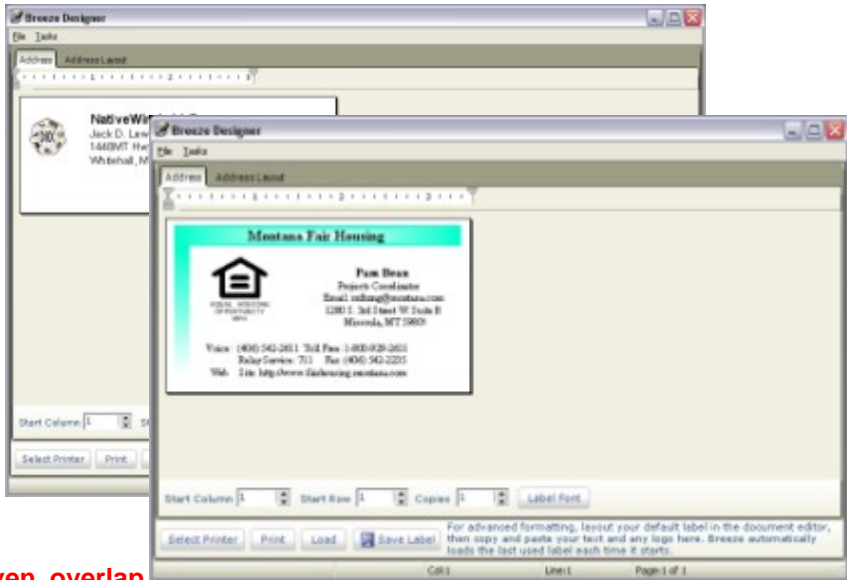

For example, you can add drop-down lists of frequently referenced items so that you'll spend less time typing. You can also add simple (or complex) calculations so that fields and totals are automatically and accurately calculated. You can designate certain fields to be 'required' so that important information isn't left out. Keep your completed forms or templates in one central location so that you can quickly locate and print any form in just a few seconds. You can even directly e-mail a 'view-only' copy of a completed form to your customers as an Acrobat PDF file (pdf) so that they can read and print it without needing to have 'Breeze Designer' or the 'Breeze Form' software installed on their computer.

Below are just a few examples of advanced electronic forms that were created with Breeze Designer. Create drop-down lists, checkboxes, integer, float, date, text and memo fields.

Mailing Labels

Do you need to print Mailing Labels, Business Cards or Envelopes? It couldn't be easier with Breeze. You can even print out multiple labels or cards at once (up to 1 full sheet at a time). Here is Breeze in '*Address Edit*' mode. Type in what you need or paste from the clipboard. Your last used label layout will be remembered and loaded each time you start Breeze.

(**As you can see - Breeze can even overlap graphics for you!**)

After you design a label or business card, you can can save it to disk and load it later when you need it. Each label or card is actually a mini Breeze document, which means you have all of Breeze's advanced formatting features right at your finger tips!
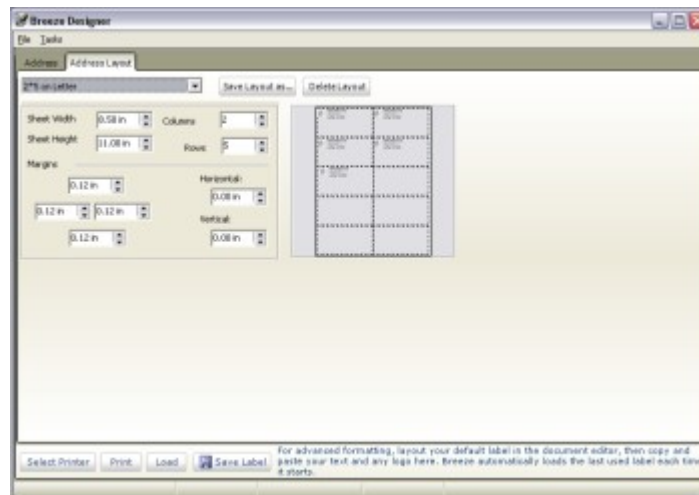

If you need to print out more than one sheet of labels or cards at a time, you can just hit the 'print' button once for each sheet you need. For even more control over your labels and business cards, the Breeze Designer Suite includes our advanced desktop publishing program - [FlexiDoc](#). The graphics and colored gradient areas you see in the business card above were created in FlexiDoc and then pasted into the 'Address Editor' in Breeze.

Here is the 'Address Layout' showing where our designed label information would print on an envelope. You can easily change your settings and save them so they can be instantly recalled later!

Here is Breeze getting ready to print out multiple address labels on a sheet.
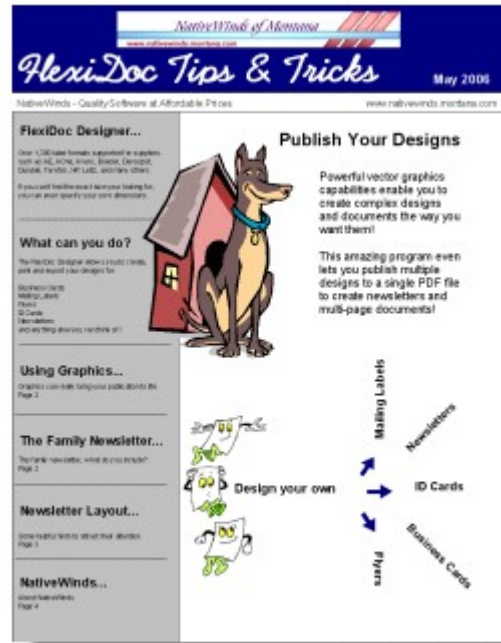

Desktop Publishing

And if that wasn't enough, our Breeze Designer Suite comes bundled with our powerful desktop publishing package - FlexiDoc! Features text rotation, vector and raster graphics, MDI interface.

The FlexiDoc Designer allows you to create, print and export your designs for

Sample Newsletter

- Business Cards
- Fax Cover Pages
- Mailing Labels
- Flyers
- ID Cards
- CAD Diagrams
- Multi-page Newsletters

and anything else you can think of!

Over 1,300 label formats supported for suppliers such as AE, AOne, Avery, Boeder, Devauzet, Durable, Formtec, HP, Leitz, and many others. If you can't find the exact size you're looking for, you can specify your own dimensions.
Export your designs as graphic images. You can export to bmp, jpg, emf and wmf graphic formats.

As with most other NativeWinds software products, you can also export your design to a fully text searchable PDF file.

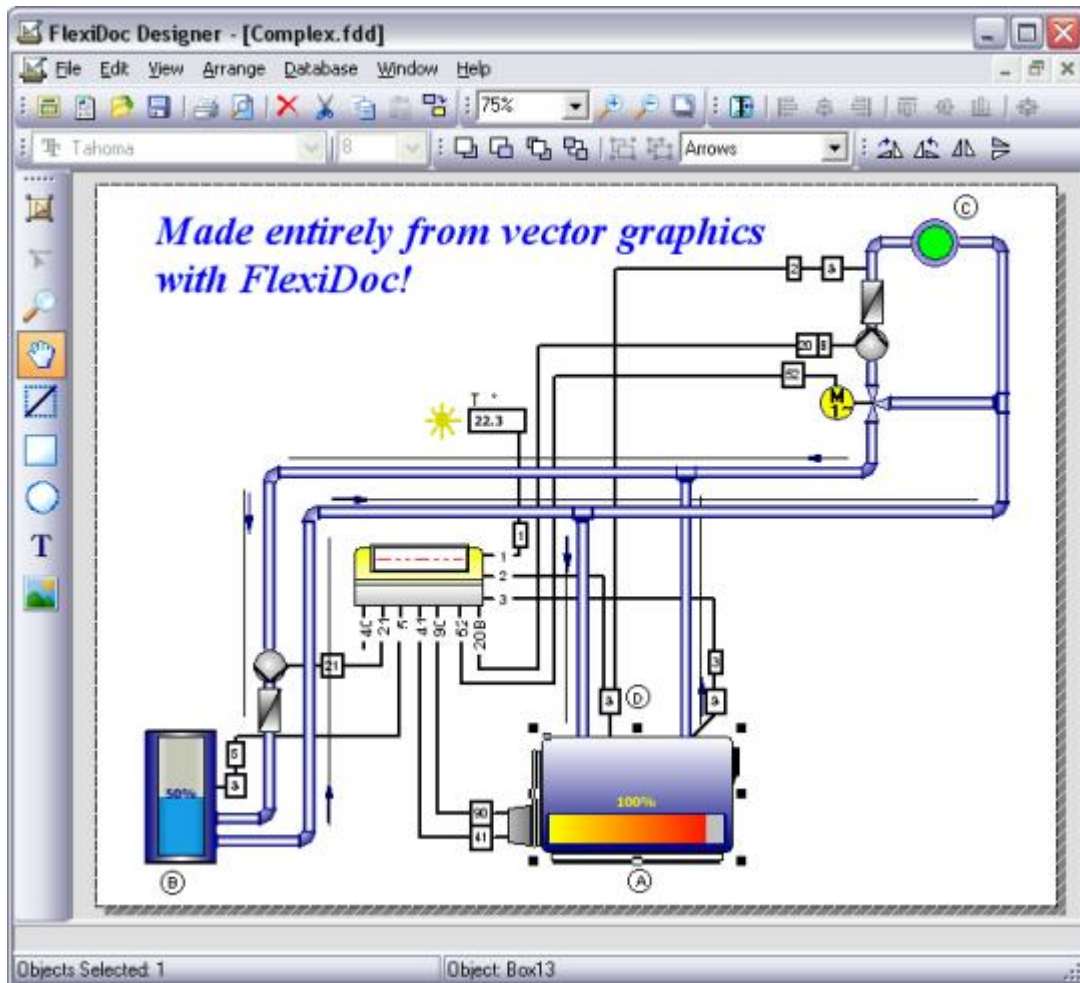

Avery 5371 Business Card

Avery 5162 Address Label

Do you need the power to create something other than cards, newsletters or labels? While FlexiDoc can handle these tasks easily, that doesn't begin to cover the possibilities available to you. FlexiDoc gives you outstanding design control with its vector graphics capabilities. With just a little bit of practice, you'll be able to create highly complex sketches and schematics that rival those created with high end CAD programs.

Work with multiple layers, hide layers, easily clone, flip and mirror objects. Group and un-group multiple objects to work with them all at once.
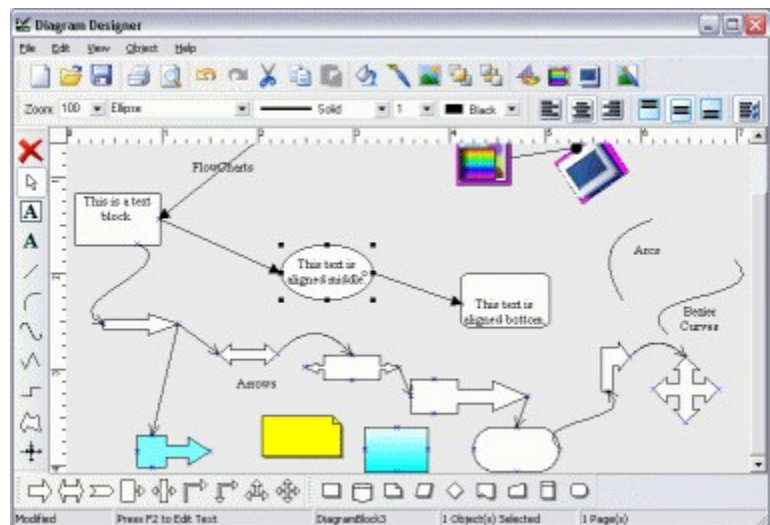

Diagram Designer

'We're not finished yet! Quickly and easily create Diagrams, Flow Charts and Organization Charts. Predefined symbols allow you to quickly put your design on paper.

Rotate, stretch, apply colors to your symbols and lines. Use gradient or solid fills.

Draw lines, arcs, bezier curves, poly lines, side lines and polygons.

Saves as dtf (design template files) and emf.

Bundled free with the Breeze Designer Suite!

Professional documents and letters, interactive forms, pdf files, mailing labels, business cards, newsletters, flyers, cover sheets, organization charts, flow charts and more.

Eliminate expensive pre-printed forms, as well as their management and warehousing. Reduce labor cost originating from manual form loading, separation and splitting of documents. Make changes to forms or documents (such as addresses), easily and instantaneously, without interruption to your system.

All together, Breeze Designer Suite's Professional Document capabilities and powerful, intelligent Electronic Form features can help you to enhance your business image and reduce the hours you spend each day on 'backroom' paperwork. So the only question you need to ask yourself is, "Why did I wait so long to switch?"

If you can imagine it, you can design it with the Breeze Designer Suite!

You can purchase our new Breeze Designer Suite CD for only $89.95.
Just visit us at our web site for details.

System Requirements:
- Printer
- Win98 to Windows Vista Operating System
- 256 MB Ram minimum, 512 MB Recommended
- 35 MB Free Disk Space
- GDI.dll (comes standard with XP and Vista. May be downloaded free from Microsoft's web site for other operating systems.)

Remember those headers and footers we mentioned earlier? This document has 3 different headers and 2 different footers. The header on this page was loaded from a header file we had saved to disk earlier. And this header does not use a table to align the images and text!

Here'a a hint on how we aligned the graphics in the header seen above:
- Insert your graphics.
- Right click on each graphic and select 'Anchor to Page -> Over Text - No Wrapping'.
- Drag the graphics where you want them.
- They stay put without moving your text.
