

Antivir_USB: Protects any drive from viruses

For using this program simply select drive and click.

CafeAdm Binary: Converts files to binary representative format or splits and merge files to .st extension.

Select file and click To Binary or To FILE if you need the file back, write bytes in text box and select split or the .st file for merging.

CafeAdm Hide Text: Generates a HIDDEN file, rename it to your purpose

Write down single line text and click OK

CafeAdm Max Encryptor: Encrypts and Decrypts files, use your secured password as described below, for cyphering PASSWORDS, use the max security level available, otherwise repeatedly generating encrypted data may give some clues of passwords if security level is below 2, before sending data over the internet or outside your private folder use another complementary encryption system.

Select File, click DOIT then COPY the password, Encrypt, for a new password CLEAR text box and again in
DOIT

CafeAdm Password Generator: Creates mostly-secured passwords, be careful of opening any file with another editor or even with windows explorer, it is recommended to use this program from start menu, very useful if you have no cam scamming problems.

This has 2 memories, inside memory and clipboard memory, the yellow box tells you when each memory has data, you can not paste a password here, only copy the password to clipboard, after using your password use clear clipboard, the gray box is a hash of inside memory data. GetFile copies info from file to clipboard and Copy to clipboard copies info from inside memory to ClipBoard.
In order to recover a password, enter date, PIN and 6 monthly chars, then for generating new passwords with
DOIT clear this information, specially the PIN area.
Use delete to securely delete a file, instead of recycle bin storage.

CafeAdm PC: Confuses and generates passwords from manual and automated input if you have cam scam problems.

Select ANY for a symbolic password

CafeAdm PR: Password verifier for minimal requirements

Minimal requirements are 12 different letters for alphabetic and 10 different numbers for numeric.

ClipHash: Creates a hash of clipboard copied text data, use S/S to Start or Stop program.

Use Security Install PC.pdf to configure your pc securely
