

Cloudup for Windows

Nice work! You created a new Cloudup stream by dragging this document to the Cloudup icon in your desktop toolbar.

3 Great ways to use the Cloudup Windows App

1. Drag and Drop

Just like you added this document, you can drag and drop any file(s) from your computer or links from the Internet to the Cloudup desktop app to create new streams.

2. Copy and Paste

Copy (Ctrl+C) text, files, code snippets, or URLs then add them by pasting your clipboard (Ctrl+V) onto the Cloudup desktop icon.

3. Screen Captures

Press Print Screen (PRTSCN) on your keyboard to take a picture of your entire screen, or use Alt+PRTSCN to snap a shot of the current window, and Cloudup will auto-magically stream the screen capture right to your account and generate a shareable link.

Customize your preferences

Click “Preferences” at the bottom of your Cloudup menu to customize your app settings. Add streams to your clipboard for easy sharing, open streams in a browser window, auto-detect screen captures, and more!
