

## Cloudup for Mac

Nice work! You created a new Cloudup stream by dragging this document to the Cloudup icon in your desktop tray.

### 3 Great ways to use the Cloudup Mac App

#### 1. Drag and Drop

Just like you added this document, you can drag and drop any file(s) from your computer or links from the Internet to the Cloudup desktop app to create new streams.

#### 2. Copy and Paste

Copy (⌘C) text, files, code snippets, or URLs then add them by pasting your clipboard (⌘V) onto the Cloudup desktop icon.

#### 3. Screen Shots

Use ⌘+Shift+4 to snap a shot of your screen that will auto-magically stream right into Cloudup and generate a shareable link. Here's more help on screen shots from [Apple](#).

### Customize your preferences

Click the cog at the bottom of your Cloudup menu to customize your desktop settings. Add streams to your clipboard for easy sharing, open streams in a browser window, auto-detect screen shots, and more!
