

4-20-11

DiskTest.EXE Version 3.2

Released 04-20-11

New Features:

Drive Support C-K

Fill Select

Standard - chr #85 "U" = 01010101

Random – A repeating string of 250 characters, generated randomly. A-Z, a-z, 0-9. No punctuation allowed. This should stop any accidental code injection due to random data.

Repeat – User entered string 1-250 characters. If less than 250 the string is repeated until it has 250.

Continuous Random – All data written to disk is continuously random.

Error codes.

The program runs until it gets any kind of error. It then halts. The only error it should ever report is 112. The error is displayed when encountered. If it is an error other than 112 then you can look it up in the built in "show error codes" button.

Fixed a "halt process" bug.

(never exited properly).
