DuperCopy

user manual

Introduction

DuperCopy aims to be a simple and easy to use tool to recover music, videos and podcasts from any iPod, iPhone or iPad.

The application is designed to run under Windows XP, Windows Vista and Windows 7 (32bit & 64bit).

IMPORTANT NOTE
The Software may be used to copy materials. It is licensed to you only for copying of non-copyrighted materials, materials in which you own the copyright, or materials you are authorized or legally permitted to copy. If you are uncertain about your right to copy any material you should contact your legal advisor.

Getting Started

If you didn't already, download the DuperCopy .zip archive here:
http://www.dupercopy.com

Before starting make sure that your system has the following items installed:
    iTunes 9.x or newer
    Microsoft .NET framework Runtime version 2.0 or higher

Launching application

Now you're ready to launch DuperCopy, extract the .zip and double click on the DuperCopy.exe executable:

DuperCopy Libs   DuperCopy.exe

Note:
Do not run the application directly from the .zip file, but extract the entire content first.

From the startup window you'll be asked to connect your device if it isn't already. The application will detect your device model and briefly extract some required files.

Usage

Once your device has been successfully loaded, the complete content of you device library will be shown in the main window. You can browse the library by Genre, by Artist, by Album or by Playlist (if any exists) and the corresponding items will be shown in the bottom library listbox.

DuperCopy is very easy to use: select the songs/videos you want to recover from the main listbox and click on the copy button on the top toolbar. Optionally you can select some options that are covered in the Copy options section. That's it.

Tip #1: You can select/deselect all items by right clicking a listbox.

Tip #2: When no items are selected in the Genre, Artist, Album and Playlist listboxes all items in library are listed.

Tip #3: Use the searchbox field on top of main window to selectively search items. Advance search options are available by left clicking on the magnifying glass icon.

Copy options

Copying options should suit most needs and allow to customize how files are written back to PC. You have some basic options to determine destination path and filename, and some more advanced which are listed below:

Basic options

Destination path   the folder structure were the selected files will be copied to according to information found in library

Destination filename   the filename of the selected files according to information found in library

Advanced options

Duplicates   the action taken when the destination file already exists

Create Playlist   when selected will create a playlist (M3U or PLS) that will contain all the selected files. The paths of files written in the playlist file can be either absolute or relative to the playlist file.

Write File tags   will rewrite copied files metadata (album, artist, title, etc) according to information found in library

FAQ

Q: *I get a runtime error on startup, what should I do?*
A: Remember to extract the entire content of the .zip archive. Together with the DuperCopy.exe file you'll need to have a *DuperCopy Lib* folder in the same path.

Q: *Some file cannot be played back once copied, why?*
A: You do need to own the rights to playback some file formats (for ex .m4p, .m4v) and setup your PC accordingly. Refer to http://www.apple.com/support/itunes/#authorization

Q: *How do I uninstall the application?*
A: Simply delete the "DuperCopy.exe" file and the "DuperCopy Libs" folder
