

WELCOME!

Thank you for downloading Plektron Echo Machine.
This guide explains how to use EM quickly and easily.

Plektron Echo Machine is an advanced delay effect that includes an HP/LP filter, an oscillator, balance control, sidechain effect (typical of a compressor) and much more. Echo Machine combines a digital delay with analog tape-style effect. With the included oscillator you can automate the stereo balance, the filter cutoff and the delay time, creating unique effects.

CONTROLS:

DELAY TIME: It selects the delay time, the display shows time in BAR or milliseconds
DELAY FEEDBACK: it adjusts the delay signal feedback (echo length)
FREE/SYNC: it selects the delay time, free in milliseconds or sync with tempo host in BAR
TIME MOD: it adjusts the modulation of the delay time
PAN: it adjusts the stereo balance of delay signal
PAN MOD: it adjust the PAN modulation
FILTER CUTOFF: it adjusts the filter frequency
FILTER CUT MOD: it adjusts the filter cutoff modulation
FILTER LP/HP: it selects the filter type, low pass or high pass
MIX: it mixes the original signal with the processed
SIDECHAIN: it adjusts the reduction of delay signal so to obtain a ducking effect
MOD RATE: it adjusts the speed of the modulator (time mod, pan mod and cut mod)
FREEZE: it "freeze" the delay signal so to obtain a repeat effect

DISPLAY: it shows the TIME delay and the name of current presets

PRESETS:

To change the presets click on left or right arrow.

To create a new preset click on the "preset name" and write a new name, then click "SAVE"
