

# EG File Encryption

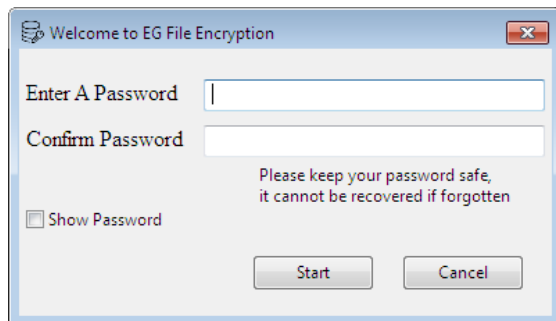

## 1.) What is EG File Encryption?

“EG File Encryption” is a software to encrypt files/folders. This software is easy, simple to use and absolutely free. You can encrypt your important, sensitive files/folders and make safe them from being accessed. Encryption is a best and powerful tool to make the data safe from being accessed. Here encrypted files/folders can be renamed, deleted but cannot be accessed.

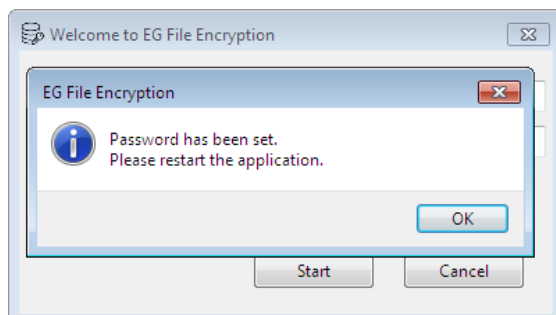

Currently, this software is available only for windows operating system (e.g. Windows XP, Windows7, Windows8, and Windows10).

## 2.) How to install EG File Encryption?

Download the setup file from our website “<http://www.egsoftweb.in>” and install it on your computer. After the installation, a dialog window will open like below:

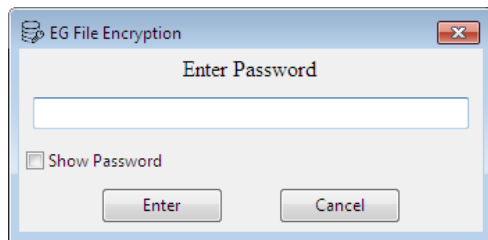

Set a strong password (a strong password contains at least two lowercase alphabets, two UPPERCASE alphabets, two digits and two other symbol like \*, @, #, \$, %, ^, & etc.) and click on button Start. After clicked on Start, your password will be set and you will see like this:

Then Click Ok button and restart the software from its shortcut on your computer desktop screen.

Then a dialog box will open:

Enter your password and click on Enter button. The main dialog window will open:

### 3.) How to use EG File Encryption?

**To encrypt a file:-** Click on radio button **File** from "*Make A Selection*". Click on Button "**Select File**" and select a file. Now click on encrypt. The encrypted file is located on the same location from we selected the file to encrypt.

**To decrypt a file:-** Click on radio button **File** from "*Make A Selection*". Click on Button "**Select File**" and select the encrypted file. Now click on decrypt. The decrypted file is located on the same location from we selected the encrypted file.

**To encrypt a folder: -** Click on radio button **Folder** from "*Make A Selection*". Click on Button "**Select Folder**" and select a folder. Now click on encrypt. First a zip file is created from the folder and then the zip file is encrypted. The encrypted Folder file is located on the same location from we selected the folder to encrypt.

**To decrypt a folder: -** Click on radio button **File** from "*Make A Selection*". Click on Button "**Select File**" and select the encrypted folder file. Now click on decrypt and you will get the zip of the folder. Next a message dialog box will ask to unzip the zip file. The decrypted folder will be on the same location from we selected the encrypted folder file.

In File menu, submenu settings provide you many options like changing password, encrypting files/folders with their name etc.

**NOTES:**

- Please read the full license page and must agree with it. If you do not agree with the license, stop using this software.
- If you forget your password we will not be able to help you in any situation. So please keep your password safe.
- If someone changes the name of encrypted file/folder then go to settings and uncheck option “Encrypt File Name” and then decrypt the file. In case of folder the decrypted file will be a “zip” file. In this case you have to put the proper extension (extension of the file before the encryption) on the decrypted file.
- If you put an extension “.efe” on any file and try to decrypt then it will be decrypted. Now to get the original file you have to encrypt the decrypted file. In this case, keep the option “Encrypt File Name” unchecked.
- A file/folder must be accessible before the encryption process else errors may occur.

#### **4.) Recommendation**

Encrypted files/folders from “EG File Encryption” can be renamed, deleted but cannot be accessed. To save the encrypted files/folders from being deleted or renamed, we strongly recommend you to use “EG FOLDER LOCK”. This software is free. You can visit our website “<http://www.egsoftweb.in>” to get this software.

#### **5.) Wish list**

If you like our software or think that it may be useful or want to suggest something about it then you can give your feedback on our website <http://www.egsoftweb.in>. We will always welcome your comments and surely notice your suggestions.

#### **6.) Report a bug**

If you find a bug or an error then you can message us or send email on our website <http://www.egsoftweb.in>. It will be your great contribution to make the software better.

Thank you for reading this document.
