

Ekran System Release Notes

What's new

Ekran System v. 4.2 introduces the following changes:

- **Dashboards:** Now you can view Ekran System information presented as easy-to-use, customizable dashboards on the Home page. Dashboards with the data on online/offline Clients, licenses, database storage usage, alerts, latest live sessions, rarely used computers and logins, and computers used out of work hours are available.
- **Keystroke grid report:** A new report type that contains the information on all activities associated with the logged keystrokes is added.
- **Management Tool log:** In the new version, you can monitor information about the actions of all users performed in the Management Tool in a special grid. All logged actions are grouped by categories and easy to filter and sort.
- **Report generation speed has been increased significantly.**
- **Metadata and screen capture synchronization during session playing in the Session Viewer has been improved.**
- **Proper remote desktop mobile clients support.**
- **Usability and performance improvements.**
