What is WebEditor2009?

WebEditor2009 by Eschelbacher Enterprises is an online web editor which allows you to manage your web pages yourself, anytime and basically from any PC worldwide.

Managing your web pages has never been easier! Now you can edit your web pages online just as easily as word processing.

Do you waste too much time and money managing your web pages? Are you looking for a simple way

to edit your web pages online and make regular changes yourself, even without programming skills? Then WebEditor2009 - easy to install and intuitive to use - is your solution!

Save time and money, [Register your full version now](#) - For only US \$ 98.

Benefits at a glance:

- Fast installation (5 minutes) with setup wizard and intuitive handling.
- No software on your PC - WebEditor2009 runs on your web server.
- Online functionality - you can modify your web pages anywhere, at home or at the Internet cafe of your holiday resort.

Have fun with WebEditor2009!

The Developer Team, **ESCHELBACHER ENTERPRISES**

2

10 Reasons for you to choose Webeditor2009

- 1 **Online functionality** - You can edit your web pages online just like a normal word processing programme - without programming skills.
- 2 **Uploading documents** - WebEditor2009 allows you to upload images and PDF files from your local PC to your web server and link them to your web pages.
- 3 **Advanced Setup** - The new setup dialog allows you to configure WebEditor2009 to your individual needs.
- 4 **Search Engine Support** - With WebEditor2009, you can add keywords and descriptions for search engines to your web documents. Making it easier for search engines to find your web pages.
- 5 **Edit parts of a page** - WebEditor2009 lets you activate parts of a page for administration, e.g. just a table field with an address.
- 6 **PHP WYSIWYG** - Edit PHP files in WYSIWYG mode.
- 7 **Edit source code** - Users with programming skills can also use WebEditor2009 to edit the source code of HTML, CSS, Javascript, PHP, Java and Perl files online.
- 8 **Free installation support** - You don't have to worry whether you can get WebEditor2009 to run on your web server. If required, our technical staff will install WebEditor2009 on your web server free of charge. Just send an email to support@eschelbacher.com.
- 9 **Setup wizard** - If you want to install WebEditor2009 yourself, the setup wizard will guide you through every step of the installation. Installing WebEditor2009 takes only 5 minutes using the setup wizard.
- 10 **Secure ordering** - Our customers can rely on the highest security standards for online payments. The VeriSign SSL certificate guarantees highest security during the [ordering process](#). You can download your WebEditor2009 package instantly after ordering.

3

What's new in WebEditor2009?

In response to inquiries from our customers, the following new features have been integrated:

- **Configurable Toolbar**

The toolbar concept has been thoroughly revised. You can now choose freely between a single or double row toolbar display and decide which buttons are to be included.

[You will find further details and examples regarding the configuration here.](#)

- **Breadcrumb Navigation**

The term "Breadcrumb Navigation" was coined in analogy with the fairy tale Hansel and Gretel. The two children scatter breadcrumbs on the path to find their way back. Breadcrumb Navigation indicates the path to the current element within highly complex element trees. Whenever you click to access a processed HTML document, WebEditor 2009 will determine the Breadcrumb Navigation and display it below the editor window.

In the following example, the user clicked on a text section () in the document being edited that itself lay within a table cell (TD). Each individual menu item of the breadcrumb path can be clicked on and this action will then select the respective element.

A click on TABLE in this example would select the entire HTML table in which the section element lies.

Breadcrumb: > P > TD > TR > TBODY > **TABLE [classes: tabletxt]** > BODY > HTML

Simultaneously, details displayed in square brackets indicate which style classes are already assigned to the table. You can now assign new style classes to the table via the style selection box in the toolbar or remove classes from it.

- **Style Dialog**

WebEditor2009 determines automatically which style classes are available for the currently loaded element and shows them in a selection box within the toolbar.

[You will find further details on the assignment of style classes here.](#)

- **PHP Online Editor**

WebEditor2009 replaces PHP segments within an HTML file by a green pin symbol. A click on this pin will allow the user to work on the source code of the PHP segment.

[You will find further details on this option here.](#)

- **"Treat_as_text" Option**

WebEditor2009 allows you to determine that certain file types, such as PHP files, should only be opened in text mode. You configure this option via parameters in the **navbar.ini** file that you will find in your WebEditor2009 installation directory.

[You will find further details and examples regarding the configuration here.](#)

- **Unformat**

Using the eraser symbol you can remove formatting from a selected piece of text.

- **New Upload Dialog**

WebEditor2009 now supports simultaneous uploading of several files.

4

Order Webeditor2009 online

Save time and money on web site maintenance and order WebEditor2009 today. Your full version of WebEditor2009 will be activated for one or more (multi-user license) domains (e.g. yourdomain.com), which can be entered on the order form. After successful payment, your package will be available for immediate download.

Order processing is performed by our partner [share-it!](#), one of the leading global e-commerce providers for software sales over the Internet, enabling us to process your orders around the clock, every day of the week. After clicking on the share-it! logo, you will be directed to a secure order form. You can either pay by credit card, cheque, bank transfer or cash. The online ordering process only takes approx. one minute.

Price	WebEditor2009 license	To order please click on the share-it!-Logo
US \$98,-	<u>Standard License</u> Valid for a single domain (e.g. yourdomain.*)	
US \$ 339,-	<u>Silver License</u> Valid for five domains.	
US \$ 519,-	<u>Gold License</u> Valid for ten domains	

Your WebEditor package is created dynamically and activated for your domain(s). Please enter your domain name(s) when prompted during the ordering process. You can download the activated product immediately after ordering.

[Please also note our information on ordering and security.](#)

6

System Requirements to use WebEditor2009

Windows-PC / MAC with Internet connection.

Web browser Microsoft Internet Explorer 5.0+ for Windows OR Firefox
1.5+ for Windows OR Firefox 1.5+ for MAC.

You must be able to run PHP scripts on your web server (Ver. 4.3+).

7

WebEditor2009 Installation Instructions

Installing WebEditor2009 is very easy. [Download the file webeditor2009.zip](#) to your PC, and then unzip it to your chosen folder. WebEditor2009 is a server-side application, which means no files are installed on your PC. No modifications are made to your Windows registry, nor any other changes to your system settings. Your PC is used only to uncompress files and to upload the uncompressed files to your web account. All the files that you need to run WebEditor2009 on your web account and to edit your website online are contained in Setup.exe in compressed form.

Double-click on Setup2009.exe to start the WebEditor2009 Installation Assistant.

[You will find further details regarding installation here.](#)

8

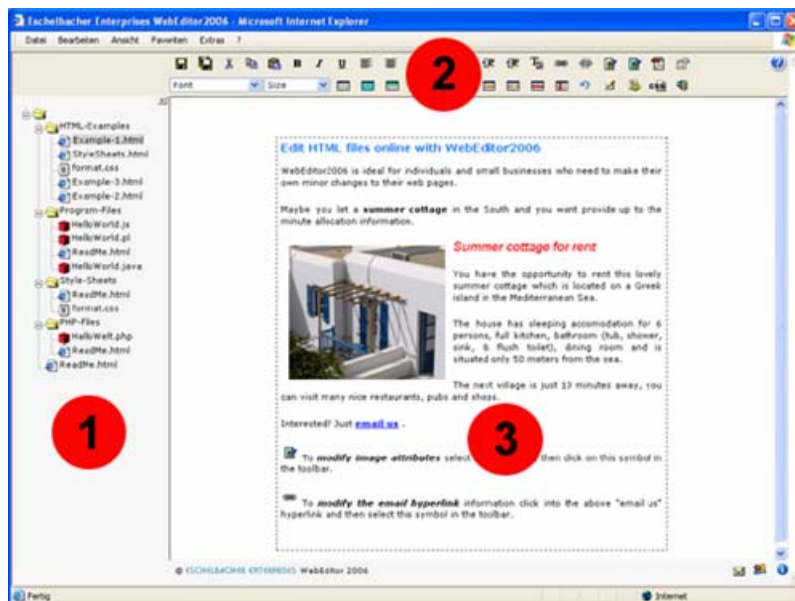

Installation support

- [FAQs – frequently asked questions.](#)
- [Visit our support pages](#)
- Need a hand? We provide free installation support for your WebEditor2009 package – including the demo version, of course. Just send us a [support ticket](#), and we'll get right back to you.

9

Edit Website Online

This is the starting screen in WebEditor2009. You can now edit HTML and text files online.

Your screen is divided into three areas:

1. **File list** - where WebEditor automatically lists all the HTML and text files found on your domain. To edit a file, just click on its name in the file list, and it will then load in the editor panel. You can show and hide the file list by clicking the toggle button at top right.
2. **Toolbar** - works exactly the same way as in common word processors such as Microsoft Word.
3. **Editor pane** - located to the right of the file list. After an HTML file appears in this pane, you can edit it. Simply select text and edit the file as you would in a word processor, using the buttons on the toolbar. You don't need any kind of programming skills.

It's important that you have read and write privileges for all the HTML and text files that you wish to edit with WebEditor2009. You also need

to have read and write privileges for the directories in which these files are located.

Generally, WebEditor2009 automatically determines the necessary privileges. However, it may occasionally be necessary to modify file privileges manually, in which case a dialogue box containing further instructions will appear.

10

WebEditor2009 Toolbar

In the older version WebEditor2006, you were able to block individual toolbar buttons. But the buttons remained visible.

In the new version WebEditor2009, you can now configure the toolbar freely. The significant variables for this are **\$navbar_row_1** and **\$navbar_row_1**.

By default, all available buttons are displayed in two rows upon installation. The maximum toolbar configuration looks like this:

[Click here to view webeditor2009 with maximum toolbar.](#)

Let's assume you only want to offer functions "Save", "Save as", "Cut", "Copy", "Paste", "Bold", "Italic" and "Underline" in the toolbar in one row. In this case you would delete the line with variable \$navbar_row_2 in file navbar.ini and set variable \$navbar_row_1 as follows:

```
$navbar_row_1 = "save,saveas,cut,copy,paste,bold,italic,settings";
```

After starting WebEditor2009, the toolbar would now be displayed as follows:

[Click here to view webeditor2009 with modified toolbar.](#)

	Undo.
	Redo.

Symbol	Effekt
	Enter / leave WebEditor2009 source code mode.
	Enter META information for search engines.
	Logout

12

Advanced Users

Click toolbar button  to start the WebEditor2006 advanced setup dialog. You can set four parameters for your work with WebEditor2006. The advanced setup dialog is divided into five tabs:

1. Folders

Choose the **folder tab** to limit the number of folders shown in the WebEditor2006 file list.

Just click on the appropriate folder(s) in the tree menu. Your selection then appears in the folder list at the bottom. Default setting is an empty folder list which means all domain folders are scanned for editable files.

To remove a folder delete the corresponding row in the folder list.

2. Files

Choose the **file tab** to limit the number of files shown in the WebEditor2006 file list.

Just click on the appropriate files(s) in the tree menu. Your selection then appears in the file list at the bottom. Default setting is an empty file list which means all editable files are displayed.

To remove a file delete the corresponding row in the file list.

3. Pics & PDF

Wie Choose the **Images & PDF tab** to define the path to your images and PDF files. Click on an item in the tree menu to select a folder.

4. Areas (optional)

Choose the **Areas tab** to restrict file selection within a single HTML file.

Beispiel: Let's say yourInfo.html contains a HTML table, one of them with a customer address. The cell ID is **CustAddress**. You only want to administer this ID. With fourth parameter **you can limit editing within one single HTML file**. A list of HTML elements (ID) separated by comma is expected. In our example the right setting is: **CustAddress**.

WebEditor checks whether one or several of the indicated ID's are available in the current document. If this is the case you only can edit these ID's, the rest of the page is locked. If none of the indicated ID's are found you can edit the whole page.

Default setting is an empty field. Now this parameter is ignored, you can edit all HTML files completely.

5. Charset

Here you can choose the basic charset for webeditor20009.

Click the **OK button** when finished. The setup dialog is closed, your WebEditor2009 window will be refreshed.

Alternative password protection

WebEditor2009 accepts alternative password protection for instance through .htaccess files.

If you want to use your own security system to protect your WebEditor2009 folder just remove file password.php. WebEditor2009 then skips its own password dialog.

13

Frequently Asked Questions

WebEditor2009 FAQs (Frequently Asked Questions) are updated frequently online.

[Click here](#) to view the current FAQ's.

14

Support Center

To improve our customer service we've introduced a new [Online support center](#).

From this area you can:

- **Submit a help desk ticket**

to request support from our staff. Every question is assigned a unique ticket number to track the issue from initial contact to final resolution.

- **Search our knowledgebase**

Just type a word or combination of words into the search box.

- **Read news**

View latest company news and announcements.

- **Download WebEditor2009**

Download the current webeditor2009 release or manuals.
