FILE-REG INTERNATIONAL

What is File-Reg.com

At File-Reg.com you can create proof of ownership/development of your work immediately!

Through File-Reg.com – you legally prove your ‘Intellectual Property’ was in your possession at a certain moment in time by registering it worldwide. If you register your work (*preferably during development*) you can legally and easily prove the origin of the work. In fact should you end up in court trying to prove it was yours in the first place we will ‘personally’ provide that evidence free of ¹charge in any court worldwide.

What Can you Register

Source code development, business plans, ideas, designs, scientific R&D, notes... whatever. We do not deal in the registration of Patents and Trademarks (such as names, logo's etc)

Size or Format of Files to Register

There no limit to the size or format of the file you wish to register.

¹ We do not however pay any of your legal expenses.

FILE-REG INTERNATIONAL

Legal Registration

File-Reg International is the only electronic registration service in the world that operates according to regulations laid down by the USA 'ESIGN' law and European Union laws regarding Digital Fingerprinting and Personal Digital Certificates, for the registration of Intellectual Property online.

Worldwide Registration

With online registration of Intellectual Property (IP) you create indisputable proof² of 'evidence' in relationship to ownership and/or development. This 'evidence' can be used in a court of law to argue any case of infringement, fraud or theft of IP etc. Many countries worldwide, including China, have adapted the same rules and regulations as the USA and EU in regard to Digital Fingerprint / Digital Certificates. This way the registrations you make can be upheld within a court of law anywhere.

Conflict elimination

By immediately being able to prove '**who**' did '**what**' and '**when**', the File-Reg system can eliminate conflicts between people, companies, within companies, and customers before they develop into expensive judicial law suits. However, should a conflict arise all registrations can be immediately verified by the registration software.

Backup

Always make a backup of all files you register.

² Proof = means that the contents of the registered file existed at a certain moment in time.

FILE-REG INTERNATIONAL

Safe

When registering, the actual file is not uploaded to the File-Reg servers, only a digital fingerprint of that file, which is also encrypted.

Every file has its own digital fingerprint. If a file³ is opened and a 'comma' is changed to a 'full stop', and then closed, the digital fingerprint of that file is immediately changed. This is what is known as the avalanche effect. The smallest change will result in the largest effect.

- Like a person's fingerprint it is not possible to see or recreate the physical features of a person from their fingerprint. It is also not possible to see or recreate the contents of a file from its digital fingerprint.
- It is also not possible for any employee at File-Reg to see what you are registering or have any idea of the type of file you are registering either during or after the process is completed.

For administrative purposes confirmation of a registration is sent by email within ten minutes back to the registrant. Apart from being able to check registered files on the computer or server of the registrant, all registrations can be checked on the File-Reg servers through the login page of the registrant.

³ There is no limit to the size or type of file a client may wish to register. For instance; MP3, wave, msword, pdf, video, exe, psd, etc etc.
