

Flash Calendar Professional

The complete calendar solution for Flash, intranet/extranet and third party applications.

Overview

Introducing the new fully interactive flash calendar software for your flash movie, browser based solutions or applications. We designed this calendar for personal usage, community website and integration with any other web-based application, no matter if you are a beginner or experienced developer.

Publishing events with rich HTML description, images, links to external page URL and allowing seamlessly browsing Year, Month and Day views is easy. Event categorization, search functionality, color gamma customization and other features make our Flash Calendar Pro a unique instrument with no alternatives on the web.

How It Works:

Calendar Pro can be placed directly on the **web page** or inserted into any flash movie as **MXP component**. Running with any web scripting language and platforms like .NET, ASP, JSP, PHP, etc., Flash Calendar allows a wide site integration option.

Besides other features, Interactive Calendar enables the front-end user to view the list of events by different time periods, filter the events by type, switch from one type of events to another, and search event details. The number of events and groups is unlimited. Events can be assigned a category and then filter your activities by this specific category. Each category can have its own color, font and text size. Define the events to repeat weekly, monthly or yearly. Enhance events with descriptions and multimedia and promote your events online.

Moreover, you can set the events to last for a certain period of time, indicating day and time from start to finish. Need help planning the workflow within next few months or tracking the schedule for 5 last years? Calendar Pro will handle it in a minute.

Key Features

Unlimited events

Keep unlimited number of events in each category.

Events categorization

Events can be grouped for easy access. Organize them by categories to make it easier for users to find events of interest.

Choose your color

You can change colors and graphics across the entire calendar so it looks and feels like the rest of your site.

Interactive view

Easy and convenient way for your website visitors to browse events and view details by category. Interact with the events by using year, month, week and day view.

Superior performance

All calendar components are optimized for high performance compatibility. Enjoy fast load time.

Keyboard navigation

Use keyboard shortcuts to perform tasks that can also be done through mouse actions.

Rich Event Description

Enrich the events details with images, icons, links and rich HTML format description!

Audio files support

Apply sound effects or add the narration to your events.

Powerful search engine **New**

Instant built-in search through the calendar by any keyword.

Multi-language support **New!**

On-demand multi-language pack with localized system messages and event descriptions.

Cool animated style **New!**

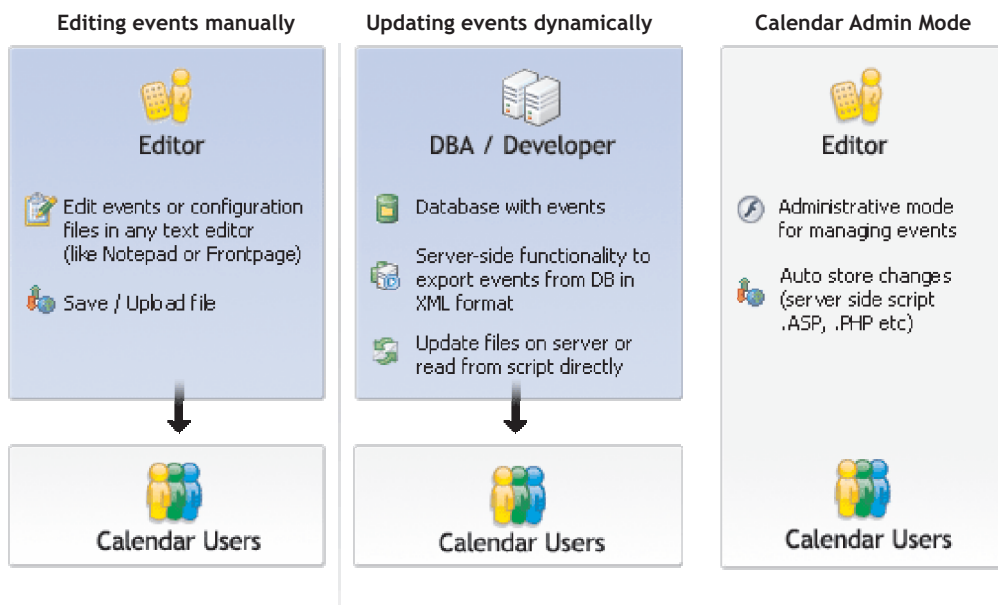

Users like active mouse over focus on selected item with blur effect, animated Zoom In / Out and slider transitions. It's fun!

Event Management

Managing your events could be done in one of the following ways: Manually, from a Database, and by using the Administrative Mode.

Requirements

Ready for Vista!

Mac OS X

Flash Player 8
or higher

Not ready for Vista :-)

We focused on creating a truly interactive calendar, when users do not need to reload a page every time they change day or view, are not limited by narrow frames, and could potentially publish any type of content: HTML description, rich media, music, video etc - either for personal needs or corporate usage. There are many other calendars such as Google and Yahoo. We also provide administration mode, but the difference is in technology and user experience. People like such cool stuff: animation and interactivity, playing with it a little bit.

Flash and animated approach - this is what makes our calendars different. It allows not only managing or checking events, but also getting satisfaction from that. Better mood, smile - this is the smallest we can do to make the world better.
