

NoFlash.exe and RegFix.exe for NoFlash are copyright 2004 by John F. Jarrett, Jarrett Consulting and IT Services and Systems, (JCITS).

Use NoFlash to turn off Macromedia Flash. There is nothing like reading the daily news from your favorite news web site and then...suddenly having a dog or a man (an advertisement!) block what you were reading and have it walk across your web browser! Argh! A Flash advertisement.

Well, that is why I wrote NoFlash.

Unzip NoFlash.zip and place NoFlash.exe anywhere you want and place a shortcut to it in your startup folder. Run NoFlash and it sits in your system tray. Double clicking the tray icon turns it on and off. When you want to disable Flash, double click it and the icon changes to one with a red slash through it. Double click again and your current web browser closes and a new browser opens up at the same page you were viewing and Flash is enabled. You can also right click the icon and use the menu to turn Flash on and off.

If after you run NoFlash.exe you get an error similar to:

Run the RegFix.exe program and try again. I have found that on (mostly) Windows 2000 computers, this error seems to appear.

This program was tested on Windows XP Pro, SP 1 and 2, Windows 2000 SP 4 and Windows 98 SE.

There is no warranty expressed or implied. Use at your own risk!

I hope you enjoy it.
