

GaugeBook beta

ChartViewerGauge

Welcome to the GaugeBook ChartViewerGauge. You can open any PDF document by pressing F1. For now you can only rotate PDF, zooming is not possible yet although the function keys are already there. Obtain charts from your local SAG or simply google some.

For now GaugeBook looks for charts in the gaugebook / charts directory. Later it shall be possible to define a directory where to look for charts and / or probably download the charts you need automatically by querying the start and end point of a flight plan and using this information to preselect the Airport :)

Have fun,
Michael
