

GrapeTC Lite

with jGrape central management
product presentation

GrapeTC Lite is a result of our view of future of terminal solutions.

It is:

- extremely **easy** for using,
 - **modern**,
 - **fast**,
 - and **safe**
- operating system.

GrapeTC Lite is easy

- One click connect to server or shutdown device.
- Updating is as easy as replacing one file by new one.
- Module structure provides easy way for development so we can add new features in extremely small terms.
- Easy installation – just unpack it on TFTP or unpack it on USB device and run one simple command.
- Easy configuring – configuration file is easy for understanding and very good documented.
- Easy configuring – possibility to group settings by files.
- And easy configuring – jGrape provides powerful tool to manage any number of GTCLite devices.

GrapeTC Lite is modern

- We use all last versions of all software.
- We try to feel modern tendencies and add support for new promising solutions as virtualization technologies or new modern terminal protocols.
- We use modern technologies for central management such as web services over HTTPS protocol.
- We always providing necessary updates for our software.

GrapeTC Lite is fast

- Booting process takes less than 30 seconds in default configuration.
- GrapeTC Lite may work even on i486 PCs!
- Interface parts and programs included in GrapeTC Lite created with our own technologies, investigated specially for slow devices.

GrapeTC Lite is safe

- GrapeTC Lite supports VPN connections to Windows PPTP servers.
- GrapeTC – jGrape connection established over the secure SSL protocol.
- There is a possibility to encrypt all private information such as saved passwords in configuration files.
- Power failure or other type of system crash is not critical for GrapeTC Lite.
- All configuration information including licenses information will not be lost during update or system crash.

jGrape app server

jGrape application server with GTC Lite configuration application provides powerful tools for configuring and managing devices running GrapeTC Lite.

jGrape app server

What is jGrape GTCLite configuration application do?

- Searching for devices running GrapeTC Lite.
- Provides GUI for changing GrapeTC Lite configuration files.
- Grouping devices and set common settings for group.
- Monitoring devices state.
- Providing access to devices screens via VNC.
- Getting full hardware information.
- Reboot, shutdown device and send messages to device.
- Can deliver configuration via SSL to device.

Grapecom philosophy

Grapecom has own philosophy and own vision for terminal technologies.

The parts of our philosophy is:

- Accessibility – our software must be easy for using and managing and friendly for our customers.
- Power and extencibility – our solutions must support as many features and protocols as necessary, we always okay to develop and implement new features, new software and new solutions.
- Other vision – we try to find non standard ways in our solutions, new ideas which can make our solutions better, easier, faster and safer then others.

Questions

Any further questions?

Information

Grapecom Ltd. has been established at 2007. We providing terminal solutions for system integrators and thin clients manufacturers in Russian Federation.

We have a small collective of technical specialists who has experience in large projects in Germany and Russian Federation.

Our headquarter is placed in Theodosia, Ukraine.
