## About GreenPhone

---

Green Phone by MobiMonster ([www.mobimonster2.com](http://www.mobimonster2.com)) aims to be a small venture to help save battery on your phone and hopefully translating into a small but tangible benefit for the environment.

Green Phone is an Eco-friendly application allows you to save on your phone's battery and charger life. Greenphone alerts you to several power consumption modules of your phone so that you can remove the charger or shut down the unwanted services to preserve power and in turn help saving the environment.

### **Backlight:**

This module dims the phones backlight as per your customization. Normal Series 60 handsets allow backlight dim timing to start from 5 seconds. With Greenphone you can set the backlight time out to as little as 1 second.

### **Charger Saving:**

Green Phone will alert you as soon as the battery of your phone is 100%. Charger saving mode will inform you by means of an SMS that the phones battery is optimally charged and that the phone should be removed to preserve the charger and to avoid any damage to the battery.

### **Bluetooth Time out:**

How many times have you forgotten to switch off the Bluetooth after transferring files? Chances are, several times. To ensure that the Bluetooth of your phone does not remain active when you are not using it, Greenphone will alert you by sending an SMS to you asking you to switch off your Bluetooth.

The SMS that are sent to you are from the application on the phone itself, any no costs are incurred by the end user for the SMS.

This product has two options:

- Light Off
- Charger Saver
- Bluetooth Saver

**Light Off:** Use the slider to fix the light off duration when the phone is not in use.

**Charger Saver:** Will notify you via SMS, when the battery of your phone is full and the charger is still connected.

**Bluetooth Saver:** Will notify you via SMS, when the Bluetooth of your phone is switched on despite no data transfer or activity on your phone.

We will continue to add new features in this application, and we would welcome your response at [support@mobimonster2.com](mailto:support@mobimonster2.com) for any new features that you wish we can accomplish to help save the environment.

## Deactivating Features

---

To deactivate any of these features individually:

Click on the **Slider**, and **drag** the slider to Zero. This will deactivate a single module.

- **To deactivate application**, Click on **On Phone Start** till the toggle value appears "**Disable**" and restart device. This will deactivate the application on phone start-up.
