Benefits

HookKeys DLL is a component that you can add to your own programs so that they can disable the keyboard, and/or disable Ctrl+Alt+Del.

Typical uses include photo kiosks, gambling machines, ATMs and generalized kiosks.

Documentation

procedure InitLibrary(purchase_key : pchar)

purchase_key - Provides the purchase key to the DLL. This is a null terminated ANSI string. This field is ignored for the evaluation version.

procedure StartKeyBoardHook(exitPhrase : pchar)

exitPhrase is a pointer to a null terminated ANSI string, defining the exit phrase that must be typed for the keyboard lockout to end.

InitLibrary must be called first.

procedure StopKeyBoardHook

Ends the keyboard hook.

procedure DisableCtrlAltDel

If initialised, disables Ctrl+Alt+Del.

procedure EnableCtrlAltDel

If initialised, disables Ctrl+Alt+Del.

function hookEnded : boolean

Tests if the hook has ended, and returns true if so.
