QUESTION: 1

Which two characteristics define cluster-aware applications? (Select TWO)

- A. They have been written to take advantage of the Novell Cluster Services application programming interface.
- B. They behave in the same manner as they do on a stand-alone server.
- C. They have been written for the automatic creation and configuration of the cluster resources and groups.
- D. They do not have the ability to automatically initiate a failover upon sensing an application fault.
- E. They behave in a manner that requires changes to the configuration of an application on one node to be manually replicated to the standby application.

Answer: A, C

QUESTION: 2

An e-commerce company experiences seasonal revenues, with the greatest sales volume occurring over the December holidays. Revenues were down last season, however, making it difficult to forecast the coming fiscal year.

How should the company determine whether upgrading its cluster is justifiable in terms of cost?

- A. Average profits and expenses historically, review against latest sales projections, and compare against the cost of the upgrade.
- B. After allowing for increased productivity, determine areas where costs can be cut to allow room in the budget for the upgrade.
- C. Calculate the cost of downtime resulting from the existing cluster troubleshooting and maintenance programs and compare with the cost of the upgrade.
- D. Estimate the cost of lost business resulting from planned and unplanned downtime and use that figure to calculate the cost of business sold.

Answer: C

QUESTION: 5

You are running a four-node Fibre Channel cluster when one of the servers suddenly abends. You determine that the server cannot be repaired and remove it from the cluster. You install NetWare on the replacement server using the same node name and IP address of the failed server.

To connect the new server to the cluster and shared storage, which three actions are you required to perform? (Select THREE)

- A. Connect the primary network controller to the network.
- B. Connect the maintenance cable to the server.
- C. Connect the maintenance cable to the master node.
- D. Connect the Fibre Channel cable to the server host bus adaptor.
- E. If the cluster node object for the server is still present, use ConsoleOne to delete the object.
- F. If the cluster node object for the server is not present, use ConsoleOne to add the object.

Answer: A, D, E

QUESTION: 6

How would you design a centralized backup solution so that each node has its own virtual backup device without slowing down the network performance?

- A. Configure the software to back up to the physical drive rather than to the logical network drive.
- B. Directly attach a backup device to a non-cluster bus on a cluster server.
- C. Place the backup device on the public LAN.
- D. Place the backup device on a network independent of the public LAN.

Answer: D
