QUESTION: 1

Which statement best describes the Monitor Administration?

- A. The Monitor Administration is responsible for adding monitors to Sitescope and CMDB.
- B. The Monitor Administration is responsible for the configuration of Business Process Monitor and CM profiles ONLY.
- C. The Monitor Administration is the starting point for EMS monitoring configuration and administration activity only when the Sitescope is registered to BAC.
- D. The Monitor Administration is the starting point for any monitoring configuration and administration activity.

Answer: D

QUESTION: 2

Which statement best describes a situation for choosing to use the Monitor Deployment Wizard?

- A. When you want to create a relationship between SiteScope monitors that are already in the CMDB and other CI's that are still not inserted to the CMDB
- B. When you want to deploy a set of SiteScope monitors to applications or servers that were already populated in the CMDB through discovery
- C. When you want to create the same set of monitors for different remote machines in SiteScope
- D. When you want to create a relationship between SiteScope monitors that are already in the CMDB and other CI's that are still not inserted to the CMDB

Answer: B

QUESTION: 3

What happens when you copy and paste a Business Process Monitor profile in Monitor Administration?

- A. A logical profile will be created but the work will not be assigned to the Business Process Monitor but rather will be used as a pointer to the same Business Process Monitor task.
- B. A new profile will be created in the Monitoring administration and the job will be sent to the Business Process Monitor but the profile will be in a stopped status until started.
- C. A new profile will be created in the Monitoring administration and the job will be sent to the Business Process Monitor but the profile will start running automatically.
- D. You can only copy and paste empty containers.

Answer: B

QUESTION: 4

HP0-M20 Demo – Pass-Guaranteed.com

What is the function of the Update Jobs button in Business Process Monitor administration?

- A. enable users to manually prompt Business Process Monitor to poll the BAC Server for changes, this is done by default every 2 minutes but could be done manually
- B. enable users to manually prompt Business Process Monitor to poll the BAC Server for changes; it also purges the Business Process Monitor memory from all of the persistent data waiting to be relayed to BAC
- C. notify the BAC Server that the Business Process Monitor is proactively sending data in irregular intervals, this updates the BAC Core Server on incoming data bursts
- D. enable users to update the instance parameters such as the target BAC Core Server and the polling interval

Answer: A

QUESTION: 5

What does the data collector maintenance page in the Business Availability Center platform enable you to do?

- A. Manage and maintain data collectors - Sitescope, Business Process Monitor, RUM and CM. Note that Real User Monitors and Sitescope can not be removed, upgraded or uninstalled using the data collector maintenance page
- B. Manage and maintain data collectors - Sitescope, Business Process Monitor, RUM and CM. Note that ONLY Real User Monitors could not be removed, upgraded or uninstalled using the data collector maintenance page
- C. Remotely installed Sitescope instances on specific servers.
- D. Manage and install Business Process Monitor, and Real User monitor probe instances on specific servers.

Answer: A

QUESTION: 6

What do global report filters which are defined from the profile entity maintenance allow BAC users to do?

- A. Define a set of thresholds by which reports will filter transactions which breached the specific threshold and will exclude them from all of BAC reports for the current and future profile sessions.
- B. Exclude per specific profile specific transactions / locations or groups from all of BAC reports for the current and future profile sessions.
- C. Exclude per specific user permissions specific transactions / locations or groups from all of BAC reports for the current and future profile sessions.
- D. Exclude per specific profile Database specific transactions / locations or groups from all of BAC reports for the current and future profiles which reside on the profile Database.

Answer: B

QUESTION: 7

HP0-M20 Demo – 100% Money Back Guaranteed!!!

In BAC, what does Metadata refer to?

- A. A set of user XML files which define the structure of a newly created User CI in the CMDB. Once the User CI is created in CMDB the definition is saved to the database where all other applications could receive the definitions of the new CI.
- B. A set of XML files which describe all of the samples structure which are valid for BAC. These definitions are inserted into the database and each internal component which is doing any data operation on the samples can get the structure definitions.
- C. A set of user defined XML files which describe data structures of third party tools such as EMS from which BAC can receive data. Once the definition is done from the UDX browser and saved to the management database, the integration with the EMS system could begin to work.
- D. The Class model structure definition which is saved in XML files within the Modeling Data Processing Server.

Answer: B

QUESTION: 8

Which data collectors are used in Mercury's Business Availability Center? (Select THREE.)

- A. Merrimack Monitor
- B. System Monitor
- C. End User Monitor
- D. Business Process Monitor
- E. Real User Monitor
- F. SiteScope

Answer: D, E, F

QUESTION: 9

What is the purpose of the Purging Manager?

- A. To purge stopped profiles which are not running data from the database in order to control the growth of the profile database and allow purging of not running profiles. The Purging Manager also organizes the data in the database in a way maximizes the performance of data fetching and inserting.
- B. To set a policy for the growth rate of the profile database and allow occasional blockage of data in cases the policy is breached
- C. To prevent the uncontrolled growth of the profile database and allow occasional controlled purging of old and unneeded data. The Purging Manager also organizes the data in the database in the a way which will maximize the performance of data fetching and inserting
- D. To purge the Business Availability Center memory cache on occasional basis in order to allow smooth functionality of the Server in the performance perspective

Answer: C

QUESTION: 10

How is the Purging Manager activation performed?

- A. Automatically once the Business Availability Center service launches and receives a default policy which elaborates which data types should be kept for which period of time.
- B. Manually once it's set to be enabled from the Business Availability Center -> Platform -> Data purging. The purging policy could be set per specific database or globally to all databases.
- C. Manually once it's set to be enabled from the Business Availability Center -> Platform -> Data purging. The purging policy could be set globally to all databases ONLY.
- D. Automatically once the Business Availability Center starts, it could be stopped from -> Platform -> Data purging disable button. The purging policy could be set per specific database or globally to all databases.
- E. Manually once it's set to be enabled from the Business Availability Center -> Platform -> Data purging, its policy could be hard coded and can ONLY be viewed and not changed, in order to change the policy you must involve R&D

Answer: B
