

# iBackup

## Backup and restore for your mobile apps.

Thanks for your interest in our mobile apps. The iBackup application backups data from iAccounts and DataTap onto your computer. It lets you browse and search your data and allows you to export and import data in comma-separated format.

### **How to install iBackup for iAccounts on Apple Mac OS X**

Simply copy the iBackup.app bundle to your Applications folder, located on your Mac. You can drag the app icon on the Dock to keep it handy.

To uninstall the software, just drag the application icon in the trash folder.

### **How to install iBackup for iAccounts on Microsoft Windows (XP, Vista, 7)**

Extract the zip file containing the iBackup installer on your Desktop. Double click on the iBackup installer to start installing the software and follow the few steps required. You will be asked to agree standard license terms and confirm the installation path.

Please note: Microsoft Windows Vista and Microsoft Windows 7 may require you to authorize the software during installation. In this case, confirm authorization to complete the installation. If you experience permissioning woes on Windows Vista or Windows 7, we suggest turning User Access Control off before installing and running iBackup with admin rights (right-click on iBackup.exe to set permissions).

To uninstall the software, launch the Uninstall.exe provided as part of the package.
