

IMAGE RESIZER

Image Resizer is a program that can resize images on the basis of dimensions and quality. The program outputs the image in JPG format.

Input: A single image or multiple images, use *Browse* to select the images.

Resizing Parameters:

- 1). **Percentage:** % height and width of the original image dimensions.
- 2). **Pixels:** Enter Max Height and Max Width, the aspect ratio of the image dimensions will be maintained internally.
- 3). **Quality:** To get best results, keep the image quality between 60 to 100.

Output: The resized images will be placed inside the original file directory with suffix “_resized” appended to the end of the file names.
