

# isScript

Thank you for your using isScript.

## 1. Introduction

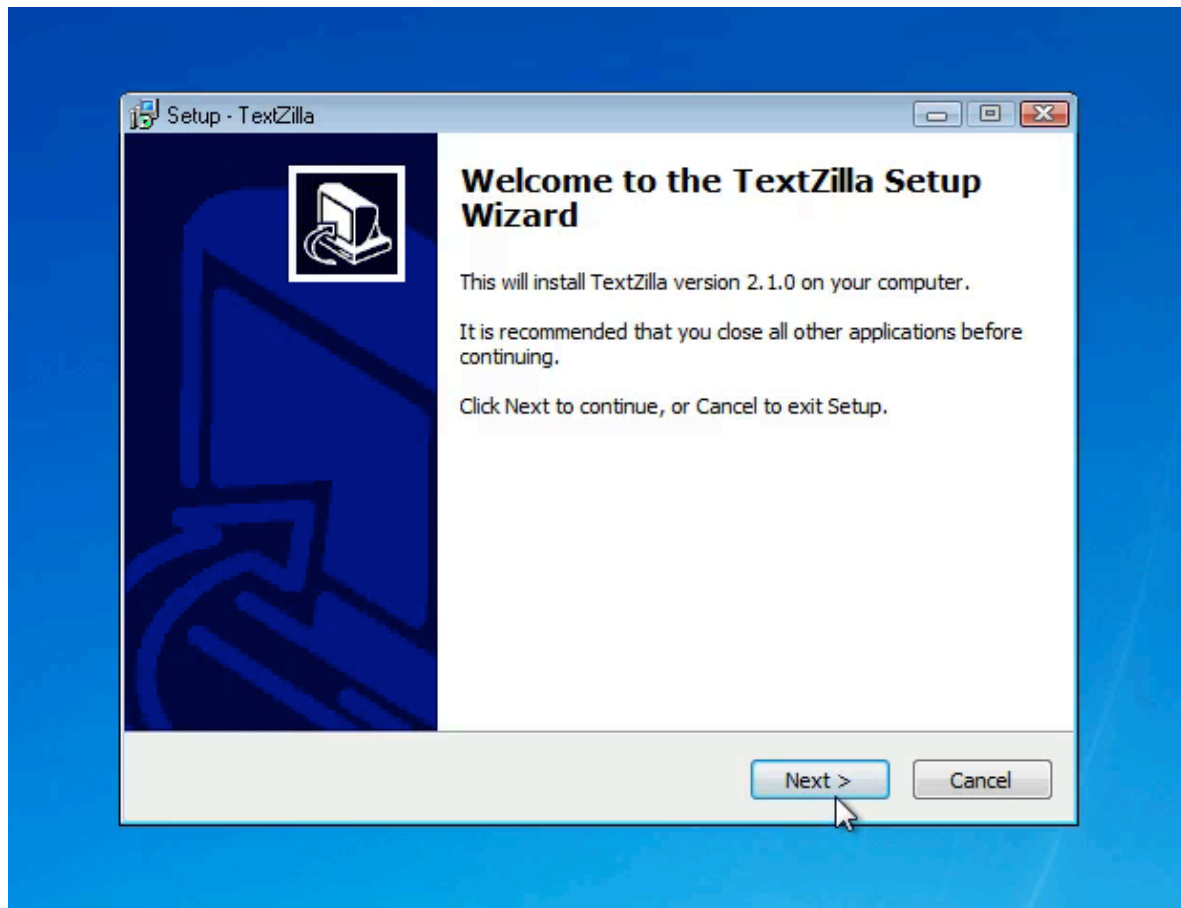

**isScript** is designed to simplify the programming process of writing **InnoSetup** code. How? Instead of clicking a button to select a file or a folder, you can just drag and drop one to a path field. You can also save your progress as a separate file. So you can open an isScript project file at any time.

Screenshot 1

## 2. Installing isScript

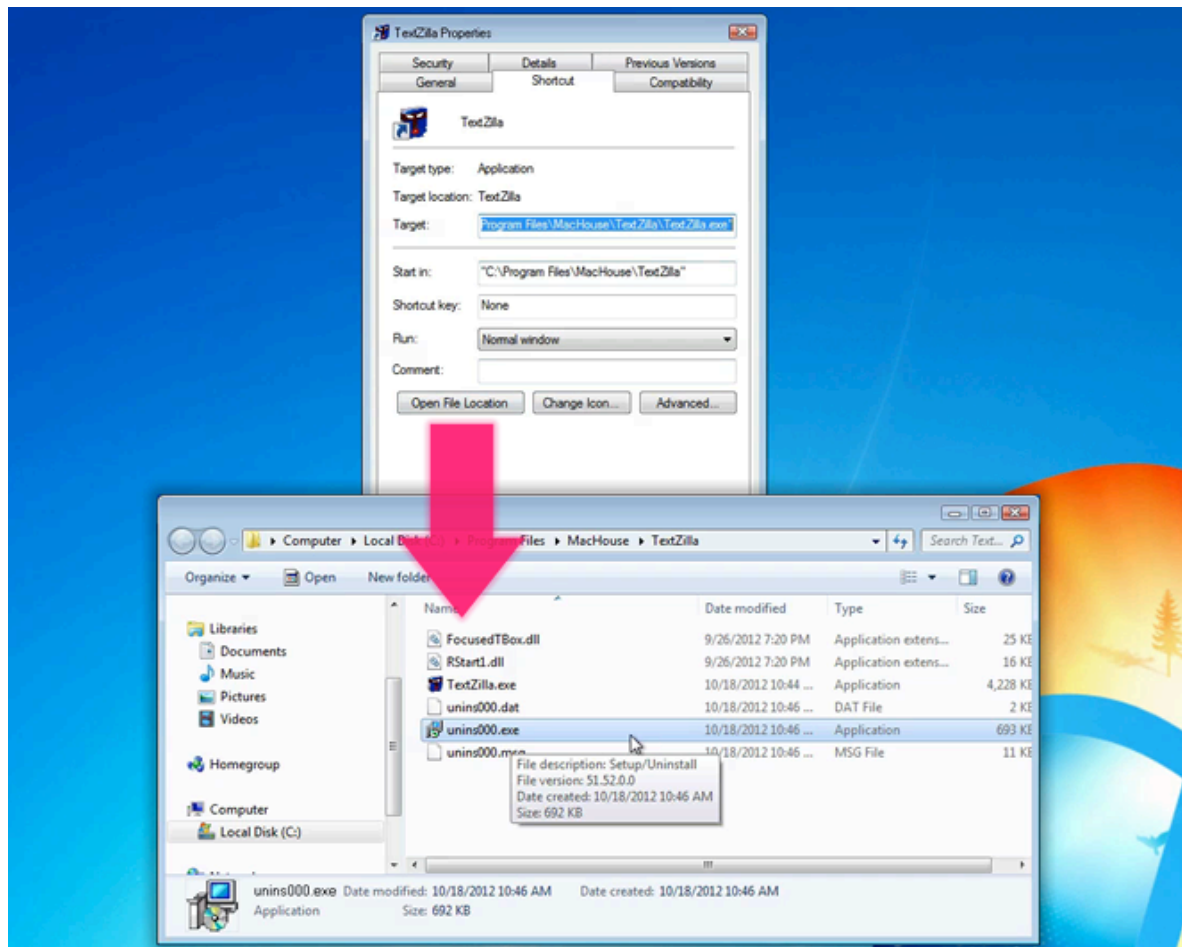

Double-click on **setup.exe** in the delivery package will initiate the installation process. (See Screenshot 2.) If your computer doesn't have it yet, you must also download **.NET Framework 4** (or higher). This setup package will not prompt you to download or install .Net Framework. So you must download and install it manually. You can download it at <http://www.microsoft.com/en-us/download/details.aspx?id=17851>.

### 3. Uninstalling isScript

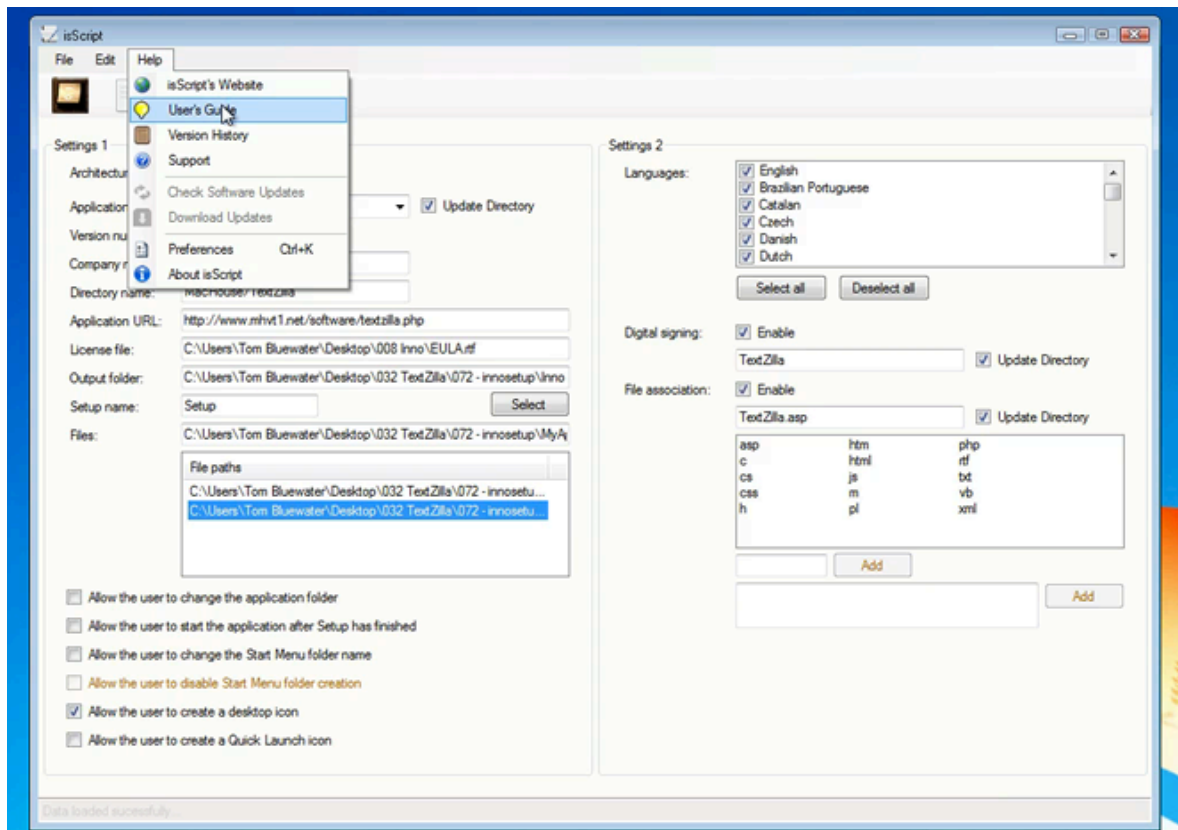

Simply, open Control Panel and choose Uninstall a program. Then double-click on isScript to initiate the uninstallation process. Alternatively, you can right-click on application's desktop shortcut and choose Properties, which will then lead you to application folder if you click on Open File Location. (See Screenshot 3.) Finally, locate an installer titled unins000.exe. Double-clicking on it, you can initiate the uninstallation process.
