

## Getting started

---

### Opening the system and getting started

---

Thank you for using JobPro Central.

If you are using the trial version of JobPro Central it is functionally identical to the production version, but will expire after 30 days of use. There are no restrictions to the amount of records you can create in each module. This way you can properly evaluate the software.

### Getting Started...

Open the 'JobPro' file (or the 'JobPro Central' file if you are using the single-user runtime version).

On opening the single user version for Windows for the first time you may be asked to enter your username. Enter your full name when prompted.

#### Login details:

If this is your first time to open the system and you have not yet been allocated a username and password then use the following details:

**Username: Joe Bloggs**  
**Password: jb**

This temporary user is assigned to the Administrator group which has full access privileges. You will need to go to Home: Setup:Access Privileges to create more groups. The 'Access Privileges' button is located bottom left of the Setup screen. By default there is an 'Administrator' access group. This group has full privileges throughout the system. This group cannot be deleted or modified.

To create a new group click the '+' button on the Setup:Access Privileges screen. You will need to specify the name for the new group. Once the group has been created you will then need to specify/tick the access privileges you would like to assign to this group. Clicking through the various tab buttons on the Setup:Access Privileges screen will allow you to tick the relevant privileges. There is a button on the 'General' tab to "Turn on all privileges for this group". This will save you having to tab through all access screens ticking every option. You can click this button and then untick the relevant options you do not want to allocate to the currently selected group.

When the groups are setup you will need to create a record for each employee and assign each a username/password and assign them to a group. This is done in the Contacts module. You do not have to set up all groups and employees straight away. You can add more at a later stage if required.

To create a new employee record click the 'Contacts' button in the top modules menu, click the 'New' button in the menu bar and click the "Employee" checkbox. Fill in all the relevant contact details. Click the 'User prefs' tab to specify access privilege details like the username, password and access group for that employee. That's all you need to do for each employee at this stage. At least one employee must be assigned to the 'Administrator' access group so that the system can be properly configured.

If you wish to properly configure the rest of the system then click the 'Setup' button on the Home screen. Here there is a setup screen for each module in the system. For more details on how to set up the system see the help topics under the category 'Setup and preferences'.

Alternatively you can go straight into using the modules and setup the system later if preferred.

**Note:** Do not set your computer to sleep if you will have the JobPro system open over the network otherwise it will lose connection to the Server and this is not ideal for the databases on the server as it is possible to damage a database.

**IMPORTING DATA:** If you plan on importing data in JobPro there is a folder within the supplied JobPro Central folder call "Import Files". Within this folder there are 3 spreadsheets that can be used for importing. Products/Services, Enquiries & Companies/Contacts. You will need to keep the contents of this folder if you plan on using the spreadsheets.

### Trial version - how to purchase

---

For information on how to purchase this product, please visit our web site at [www.jobprocentral.com](http://www.jobprocentral.com) or send us an e-mail to [sales@jobprocentral.com](mailto:sales@jobprocentral.com)

---

## Getting started

---

### Install JobPro (Multi user version using FileMaker Server)

---

Put the JobPro Central folder (uncompressed) to a location of your choice either on the server machine or a client machine on the same network as your server machine. You must have FileMaker Pro 13 installed to upload your instance of JobPro Central to FileMaker Server.

Open FileMaker Pro.

Go to File menu > Sharing > Upload to FileMaker Server to transfer your JobPro database to FileMaker Server.

Select the appropriate Host from the drop down (normally local host) and select the server machine in the list.

Enter your FileMaker Server Admin Console Name and Password that you setup during deployment assistant, click next.

Click on Browse and locate your JobPro Central folder that you previously saved (uncompressed) onto your machine. Within this folder there is another folder called "Data". Within this folder highlight the file called "JobProData". Then click 'Open'. Then 'Upload'.

Once the file has uploaded you can click on 'Done'.

You will now need to run through the same procedure as above to upload the "JobPro" file that is located inside the JobPro Central 7.5Vx folder. You also need to follow the same procedure for the file called "Mobile\_Sync" which is again located within the folder ...JobPro Central 7.5Vx/Data.

It is VERY IMPORTANT that the procedure is followed above and that files are not uploaded to the server in any other order or as a batch upload. The files must be uploaded individually as described above.

If you now log into FileMaker Server Admin Console (<https://serverip:16000/admin-console> or <https://localhost:16000/admin-console> if you are on the server machine) click on "Activity" in the left hand column you will see your databases should now show under the "Databases" tab with the status "Normal". If any of the databases are showing the status "Closed", select the database, click on the folder icon in the top right and then choose "Open". This will then set the status of your database to "Normal".

If you are planning on accessing your JobPro Central database from outside your local network you will need to inform us as there is a small change we need to make to your file to accommodate. You will need to provide us with both the local ip address of your server and your external ip address for us to insert into your instance of JobPro.

Notes:

The default location set by Filemaker Server to host your database file is:

Windows server:  
C:\Program files\FileMaker\FileMaker Server\Data\Databases

Mac OSX server:  
Library:FileMaker Server:Data:Databases

What happens when you upload the database is that Filemaker server copies the JobPro file to the specified "Databases" location. It also creates a folder called "RC\_Data\_FMS". Inside this folder is a folder called "JobPro". Within this "JobPro" folder there is a "Files" folder created. Contained within the "Files" folder are sub folders storing images and documents required by JobPro as well as documents added by users in the Documents module.

All documents and images inserted into JobPro in the Documents module will be stored in:

Windows Server with defaults selected:  
C:\Program files\FileMaker\FileMaker Server\Data\Databases\RC\_Data\_FMS\JobPro\Files\Documents

Mac OSX server with defaults selected:  
Library:FileMaker Server:Data:Databases:RC\_Data\_FMS\JobPro\Files\Documents

IMPORTANT OSX Server: After installing FileMaker Server you may need to reset the ownership and permissions for the 'Data' folder located Library:FileMaker Server:Data so it is not set to read only. The 'Databases' folder may need to be done as well.

## Getting started

---

### Install JobPro (Multi user version using FileMaker Pro)

---

These instructions are relevant to sharing JobPro where you are NOT using FileMaker Server but instead using FileMaker Pro on a user's computer - also referred to as "peer to peer sharing". To host JobPro so other users can access it as clients, you will designate one of the computers/users as the host computer and the others will access the host computer as a guest working on a peer to peer network. If networked, all computers can access the same files at the same time.

'FileMaker Sharing' needs to be turned on within the FileMaker Pro application on the host computer. To do this open up FileMaker Pro (leave JobPro closed) and in the File menu select 'Sharing' and then 'FileMaker Network'. Make sure 'Network sharing' is turned on. If this is not the case then you will get an error on opening JobPro that the files cannot be shared.

The JobPro folder needs to be located on the host computer. JobPro needs to be open on the host computer for other users to open the system as a guest.

Once JobPro is open on the host computer each user opens FileMaker Pro on their own computer and they can either select 'Open Remote' from the File menu or click on the 'Remote' button in the 'Open File' dialog box. This will then search the network and display the name of the host computer. Clicking on the host computer name will display the file called 'Home' and the user can then double click this file to open JobPro.

It is important that the JobPro database remains in the JobPro Central folder that was supplied as there are sub folders in this folder that the JobPro database relies on, specifically the "Files" folder that contains any images and documents used in JobPro.

**IMPORTANT:** Remember to backup the JobPro Central folder regularly but if you are not using FileMaker Server you will need to close JobPro first otherwise the backup will be happening on an in use database and that is not recommended.

---

# Getting started

---

## Install JobPro (Single user version)

---

To use JobPro as a single user installation on your local machine place the uncompressed JobPro folder in the location of your choice. We do not recommend you place your JobPro folder on your desktop. Also, when choosing the location of your JobPro folder please bear in mind any backup procedures that may be running on your machine. Our customers are solely responsible for their own data. The JobPro folder contains the main JobPro file as well as a 'Files' folder that stores any images and documents used in JobPro. Do not remove the JobPro database from this folder as it will break links to the 'Files' folder.

**IMPORTANT:** Remember to backup the JobPro Central folder regularly but you will need to close JobPro first otherwise the backup will be happening on an in use database and that is not recommended.

---

## Getting started

### Importing Records into JobPro

#### Import options

Import data from pre populated spreadsheets.

- ▶ **Enquiries / leads:** Import data into the Enquiries module
- ▶ **Contacts / Companies:** Import data into the Contacts and Companies modules
- ▶ **Products / Services:** Import data into the Products / Services module

**Instructions:**

- 1) It is important that you read any comments in the relevant spreadsheets as specific details for certain columns are given there.
- 2) Populate and save the relevant spreadsheets prior to importing.
- 3) Do not change the order of the columns in the spreadsheets as that will cause data to be imported into the incorrect fields in this system.
- 4) Backup this database prior to import.
- 5) Choose an option above to import data from the relevant spreadsheet.

**Notes:**

Please contact technical support if you do not already have the relevant spreadsheets.

If you are importing or entering data in the trial version (downloaded online) that you wish to keep if you purchase the system then let us know as we can email you a link to another version of the trial as the version online is locked out for security reasons.

If you have requirements for data importing that are not covered by these import options then please contact us for further options so you do not have to manually enter data into the system.

Cancel

It is possible to import records into the following modules;

**Products**  
**Contacts**  
**Enquiries**

Your JobPro installation came with a folder called "Import Files". If you have deployed JobPro via FileMaker Server the folder will not have been copied to your database location on the server. Per the installation instructions you should have this folder in a location of your choice. If you have a single user installation scenario the folder will exist at the same location as your JobPro database file.

Within the "Import Files" folder you will have 3 importation templates. These are excel based templates that contain the correct schema to facilitate importation into your JobPro database. It is very important not to change any column headings in any of the templates as they will not function. We will go through each of them in turn in this document.

## The Products Importation Template

Listed below is a description of each field in the template and any notes we feel are relevant.

### Product Code

A product code must be entered if codes are normally manually entered in new records in the Products module. A setting in setup:products allows you to specify this. If a product code already exists in the database that also exists in your import file

## Getting started

---

### Importing Records into JobPro

---

the import will be aborted with no records having been imported.

Enter a product code if you do not wish the system to generate a serial number on import for the product code. If left blank the system will use the next available number during import. If left blank it is possible to create duplicate products in the database albeit with different product codes.

**Name**

The name of your product or short name for your product.

**Description**

The details of your product.

**Type**

Is the product a finished product, service product or raw material. You can edit what is in the product type list in setup:Lists & Menus:Product Type. If you have a value in your import file that does not exist in the list the import will still place your specified value in the field.

**Cost Price**

The cost price for your stock item.

**Sell Price**

The net of tax sales price for your item.

For each item you can input a sell price OR a markup. If you enter both then the sell price will be ignored.

**Markup**

For each item you can input a sell price OR markup. If you enter both then the sell price will be ignored. Enter markup with a full number. E.G. 20 for 20%.

**Purchase Tax Code**

If you are planning to export data into an external accounting package, such as Quickbooks or SAGE, you should specify the correct purchase tax code for your stock item here. It is best to specify these in the system before import at setup:Lists & Menus:Accounts - Purchase Tax. These should match codes setup in your accounting system.

**Sales Tax Code**

If you are planning to export data into an external accounting package, such as Quickbooks or SAGE, you should specify the correct sales tax code for your stock item here. It is best to specify these in the system before import at setup:Lists & Menus:Accounts - Sales Tax. These should match codes setup in your accounting system.

**Purchase Nominal Code**

If you are planning to export data into an external accounting package, such as Quickbooks or SAGE, you should specify the nominal account under which you would normally track purchases for this item. These can be specified at setup:Lists & Menus:Accounts - Nominal Codes. These should match codes setup in your accounting system.

**Sales Nominal Code**

If you are planning to export data into an external accounting package, such as Quickbooks or SAGE, you should specify the nominal account under which you would normally track Sales for this item. These can be specified at setup:Lists & Menus:Accounts - Nominal Codes. These should match codes setup in your accounting system.

**Category Code**

Enter the category code in here, not the full category name as that is entered in setup:Lists & Menu's: Category.

**Manufacturer**

Enter the name of the stock items manufacturer here. This does not relate to the supplier of the item.

**Manufacturer Part No.**

Enter the manufacturer's part. no. here even if it is the same as the product code used.

**Manufacturer Model No.**

If the manufacturers model no. differs from its part no. you can enter it here.

Not all fields are mandatory in this import file.

## Getting started

---

### Importing Records into JobPro

---

#### The Contacts Importation Template

When company/contact records are imported, the 'Our Rep' and 'Identity' fields in the imported records will default to the current user's name and the default identity as specified in Home:Setup:My Company. Ideally these should be setup correctly before the import to save time having to edit each imported record afterwards.

**Company Name**

Enter the company name here.

**Customer**

If the company is a customer then enter 1 in this field.

**Supplier**

If the company is a supplier then enter 1 in this field. A company can be both a customer and a supplier.

**Company Type**

The list of company types can be edited at setup:Lists & Menus:Company Type. If your import contains a value that is not in the Company Type list it will still be imported to your database.

**Company Category**

The list of company categories can be edited at setup:Lists & Menus:Business Category. If your import contains a value that is not in the Business Category list it will still be imported to your database.

**No. of Staff**

An optional field.

**Company Address Line 1**

The address of the company you are entering.

**Address Line 2**

The address of the company you are entering.

**Address Line 3**

The address of the company you are entering.

**Town/City**

The town or city of the company you are entering.

**County/State**

The county or state of the company you are entering.

**Zip/Post Code**

The Zip or Post code of the company you are entering.

**Country**

The Country of the company you are entering.

**Company Phone**

The company main phone number.

**Company Fax**

The company main fax number.

**Company Email**

The company main email address.

**Website**

Company website.

**Title**

If desired enter a persons salutation here such as Mr.,Mrs, Dr. etc.

## Getting started

---

### Importing Records into JobPro

---

**First Name**

Enter a persons first name who is related to the company.

**Last Name**

Enter a persons last name who is related to the company.

**Customer**

If the contact is a customer in their own right then enter 1 in this column. If they are just a contact linked to a company that is the customer then do not enter anything in this column.

**Contact Type**

If required there is a drop down list in JobPro at setup:Lists & Menus:Contact Type that allows you to customize the type of contact this is to your business and the associated company record. Anything entered in here not in your setup will still appear correctly in the record after importation.

**Direct Dial Phone**

Enter your company contacts direct dial number here.

**Direct Dial Fax**

Enter your company contacts direct dial fax number here.

**Mobile / Cell Phone**

Enter your company contacts mobile number here.

**Home Phone**

Enter your company contacts home phone number here if applicable.

**Contact Email**

Enter the contact email address here.

**Position**

Enter the contacts position within the company. In JobPro under setup:Lists & Menus:Position you can amend the list of accepted positions for your database. If you import file contains something that is not in your setup list it will still import.

**Department**

Enter the department in which your contact works within the company. In JobPro under setup:Lists & Menus:Department you can amend the list of accepted departments for your database. If you import file contains something that is not in your setup list it will still import.

**Ext. No.**

Enter the phone extension number of your company contact here.

**Contact Address Line 1**

If there is a company and address entered on the line and this contact is located at the same address then leave this address blank.

**Address Line 2**

If there is a company and address entered on the line and this contact is located at the same address then leave this address blank.

**Address Line 3**

If there is a company and address entered on the line and this contact is located at the same address then leave this address blank.

**Town/City**

If there is a company and address entered on the line and this contact is located at the same address then leave this address blank.

**County/state**

If there is a company and address entered on the line and this contact is located at the same address then leave this address blank.

**Zip/post code**

### Importing Records into JobPro

---

If there is a company and address entered on the line and this contact is located at the same address then leave this address blank.

#### Country

If there is a company and address entered on the line and this contact is located at the same address then leave this address blank.

### The Enquiries Importation Template

#### Title

If desired enter a persons salutation here such as Mr.,Mrs, Dr. etc.

#### First Name

Enter a persons first name who is related to the company.

#### Last Name

Enter a persons last name who is related to the company.

#### Position

Enter the contacts position within the company. In JobPro under setup:Lists & Menus:Position you can amend the list of accepted positions for your database. If you import file contains something that is not in your setup list it will still import.

#### Company Name

Enter the company name that the enquiry is related to here. Please note this will not created a company record for your enquiry it serves merely as a place holder for the company name related to the enquiry. It is possible at a later stage to create a company record from the enquiry record.

#### Department

Enter the department in which your contact works within the company. In JobPro under setup:Lists & Menus:Department you can amend the list of accepted departments for your database. If you import file contains something that is not in your setup list it will still import.

#### Address Line 1

The address of the company you are entering the enquiry for.

#### Address Line 2

The address of the company you are entering the enquiry for.

#### Address Line 3

The address of the company you are entering the enquiry for.

#### Town/City

Enter the town/city of the company you are entering the enquiry for.

#### County/State

Enter the county/state of the company you are entering the enquiry for.

#### Zip/Post Code

Enter the zip/post code of the company you are entering the enquiry for.

#### Country

Enter the country of the company you are entering the enquiry for.

#### Company Phone

The company main phone number.

#### Company Fax

The company main fax number.

#### Company Email

The company main email address.

#### Website
