

Title: Keep configuration, security and custom transformations when upgrading to V8

Last review: February 2013

Author: MK

When upgrading your current version of Match to our new Match (version 8), you will need to keep config.xml, security.bin and CustomTransforms.txt.

- The config.xml holds all session settings and configurations.
- The security.bin holds all of the security settings for Match.
- The CustomTransform.txt holds all of your custom transforms.

To do this you will need to do the following steps BEFORE installing the new version:

- Go to 'C:\DQGlobal\Match\v7.5'
- Or
- 'C:\Program Files (x86)\DQ Global\Match' (Windows Vista and above)
- Or
- 'C:\Program Files\DQ Global\Match' (below Windows Vista)

Then copy the config.xml, security.bin and CustomTransform.txt from the above directory and keep in a safe place.

- Now install Match Version 8.
- Then copy the previous config.xml, security.bin and CustomTransform.txt into the following directory overwriting the files:
 - 'C:\DQGlobal\Match\v8'

You should now be able to log into the new Match using your normal password with all of your previous sessions and settings still available.

If you experience any other issues or problems, please contact us on support@dqglobal.com.
