QUESTION: 1

There are important differences between a normal level and a detail level.

What statements are true about a detail level?

- A. The detail level must always be implemented using a spreadsheet control.
- B. The detail level is not always implemented using a spreadsheet control.
- C. More than one record can be retrieved from the database and displayed at one time.
- D. Only one copy of a record is displayed from the database. The user must commit or abandon changes before moving to another record.

Answer: A, C

QUESTION: 2

Which statement is true about Record Maintenance?

- A. This utility program actually creates new tables in the Solomon database.
- B. This utility is used to define the following properties of a table: Name, Fields and Indexes.
- C. This utility allows a developer to define the names of new tables. It does not actually create tables in the Solomon database.
- D. This utility reads the actual database schema from the Solomon database and displays all actual tables in that database except for MS SQL system tables.

Answer: C

QUESTION: 3

Occasionally, data displayed in a field on a window will appear in a different format than what is shown when viewed directly from the database.

What property can be checked and/or changed so the data is converted and displayed with the correct format?

- A. Fieldclass
- B. Fieldname
- C. Default
- D. Mask

Answer: A, D

QUESTION: 4

When a user moves to a line in a grid, the kernel triggers a LineGotFocus event in the Solomon Tools for Visual Basic program.

MB4-213 Demo – Pass-Guaranteed.com

What best describes the purpose of the information that the kernel passes to this event via the MaintFlg parameter?

- A. The value indicates the status of the line the user just moved to.
- B. The value indicates the status of the line the user just left.
- C. The value indicates the status of the logical level the grid is associated with.
- D. The value indicates whether the user interface is currently in "grid view" or "form view".

Answer: A

QUESTION: 5

Although these are not requirements, what are common programming practices when starting a new Tools for Visual Basic project?

- A. Name the VBP file and the FRM file the same as the seven character screen number for the program being created.
- B. Do not overwrite the template files.
- C. Save the VBP file and the FRM file in the newly created development directory.
- D. Contact Microsoft Business Solutions to request ID numbers and table names for any new tables you will be adding to the database.

Answer: A, B, C

QUESTION: 6

When the user hits the F3 function key on a field that has a PV property, where does the kernel get the information needed to determine what should be included in the Possible Values window?

- A. The Kernel executes an sp_columns SQL stored procedure to get the list of fields of the tables used in the stored procedure named in the PV property of the control
- B. The Kernel reads the PVREC.csv file in the DB\CVS fold of the Solomon install directory which contains the definition of the possible values window.
- C. The Kernel retrieves a record of the PVREC table in the Solomon system database which contains the definition of the possible values window.
- D. The Kernel does not automatically create the possible values window. It's the VB programmer's responsibility to create the window and display that window when the F3 event fires

Answer: C

QUESTION: 7

What must be done to set up a database side cursor to be used for a new level?

MB4-213 Demo – 100% Money Back Guaranteed!!!

- A. The database server must be told to create the cursor.
- B. The Solomon Kernel needs to be told that the cursor being created is to be used for the level being added.
- C. The handle to the cursor must be stored in the global variable created for it.
- D. The file containing the bitmap image that defines what the cursor should look like on screen must be added to the VB project.

Answer: A, B, C

QUESTION: 8

When working with Solomon reports, which statements are true?

- A. In order to print a report from the menu or from the program, a record must exist in the RptControl table.
- B. By locating the definition of the primary index on the table in the database and then automatically enforcing that rule in the user interface.
- C. At least one report format must be defined for each report number in the Report Control Maintenance program.
- D. The report number is the unique identifier for the RPTControl record.

Answer: A, C, D

QUESTION: 9

The Status function and the process status form are designed to manage and/or implement which of the following functions that commonly need to be handled performing operations on multiple entities such as records a database?

- A. The status function will automatically handle beginning, committing and possibly rolling back SQL transactions.
- B. The Process status form, with the proper use of the Status function, provides a consistent user interface for notifying the user of what is happening during a lengthy process.
- C. If the Status function is used properly, it will respond to SQL database errors that might occur during a process by automatically generating event logs that describe what error occurred and what was being processed when the error occurred.
- D. The process status form automatically displays a progress bar to inform user of what percentage of a process has been completed so far.

Answer: B, C

QUESTION: 10

MB4-213 Demo – Pass-Guaranteed.com

When automating a Solomon program using the Solomon Object Model, which controls on the program are accessible via the SIVControls collection (assume the program being automated does not have any controls on it that are not supported by the Solomon Tools for Visual Basic Kernel)?

- A. Only data controls and buttons on the currently active form not including controls that were added via customization manager.
- B. Only data controls and buttons on the currently active form including controls that were not added via customization manager.
- C. All data controls and buttons in the entire program regardless of the form they are, not including controls that were added via customization manager.
- D. All data controls and buttons in the entire program regardless of the form they are, including controls that were added via customization manager.

Answer: D
