

Ndara iSMS Backup

<http://code.google.com/p/ndara/>

Quick Guide

Ndara iSMS Backup.jar
Executable Jar File
348 KB

To execute click .jar file

Requirements:

- * Jailbroken iPhone 3G
- * SSH installed
- * WiFi connection.
- * Latest Java Runtime (JRE)

Specify what kind of backup you would like. If you would like to backup a single contact then specify their 10 digit phone number preceded with a +. Do not enter any spaces.

Specify a folder location. The backup file will be saved to this folder.

The screenshot shows the Ndara iSMS Backup application window with the following fields and options:

- 1.** IP Address: 192.168.0.101
- User Name: root
- Password: alpine
- 2.** ☒ backup all messages
☐ backup only from this contact >
e.g: +3216540987
- 3.** Backup as:
☒ Styled XML
☐ Plain Text
☐ SQLite DB
- 4.** Backup Directory Location: g:\Desktop\Ndara\MyBackup [Browse]
- Buttons: Close, [Verbose], Begin Backup

Check this box for progress status messages. Informative during troubleshooting.

SSH settings of your iPhone. If you haven't changed your SSH username and password then leave the defaults.

Troubleshooting:

- * Ensure SSH is installed and ON
- * Ensure 3G is turned off
- * Ensure WiFi is connected
- * Ensure iPhone and PC are on the same network

Choose your backup format. Note that SQLite DB cannot be chosen for a single contact backup.

Styled XML

Notes:

- Ndara is a Java application that has currently been tested on Windows XP and Vista with a Jailbroken iPhone 3G.
- * Ndara will **not** work with the **iPhone 2G**.
- * Ndara will **not** work with **non Jailbroken** iPhone 3G phones.
