NetDoc AD

Version Overview

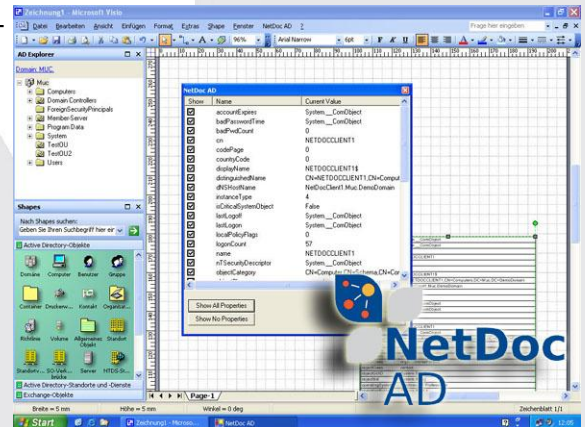

DataAssist NetDoc Product Family

DataAssist NetDoc AD

Detailed and visualized Active Directory documentation with DataAssist NetDoc AD, an Add-in for Microsoft Visio 2003 Professional.

NetDoc AD is an add-In for Microsoft Visio Professional 2003 to accomplish a semi-automatic documentation of Active Directories (AD).

NetDoc AD reads out the Active Directory of a network and reproduces it graphically as a tree structure in Visio via the AD explorer. You can easily adjust the information density by transferring either single elements or all of the elements via drag and drop from the AD explorer onto the drawing. Of course the Custom Properties of objects are carried over, too.

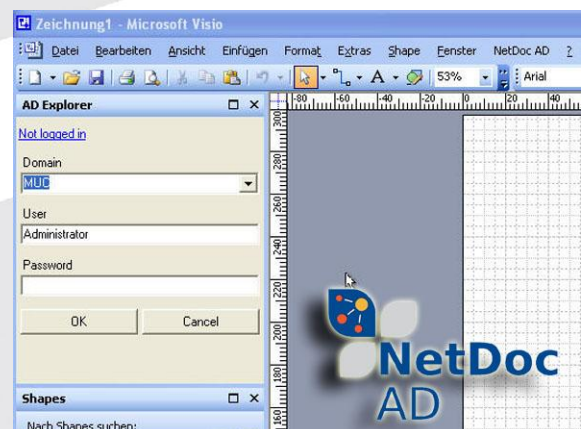

NetDoc AD processes the AD container by means of sub-elements. SmartTags in the diagram point out the sub-elements of any object which can be easily faded in or hidden at will. For example, you can either display in the drawing user groups only or all single members of a respective group.

NetDoc AD integrates smoothly into Microsoft Visio via the menu „NetDoc AD“, from where all functions can be accessed. This menu facilitates quick access to all Microsoft Visio export and reporting functions. Native Visio diagrams provide the basis, all data is available in the common „Custom Properties“ menu.

Multi Domain Feature

The DataAssist NetDoc AD Multi Domain Version allows – in contrast to the Single Domain and Single Domain SE Version - documentation of any number of domains. Your AD Explorer is accordingly fit out with a login window where you simply select one of the connected domains.

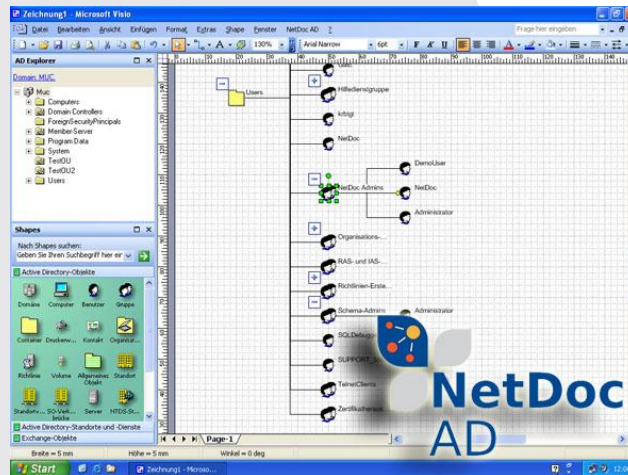

DataAssist NetDoc Product Family

DataAssist NetDoc AD Single Domain SE

DataAssist NetDoc AD Single Domain SE is especially tailored to institutions of education and seminar centers. Coaching and training in the field of Windows network administration call for a profound knowledge of Active Directory. Our SE edition enhances - thanks to a visual preparation of the AD Elements- the comprehension of structure, functions and contents of an Active Directory. Seminar participants can easily and quickly gain tangible and visual information that is even difficult to access in an Active Directory by an experienced administrator.

All NetDoc AD Versions feature:

- Depiction of all user group members on selecting a group
- Smart and printable presentation of Custom Properties
- Smart and customizable labeling of Shapes
- Drag and Drop function for easy presentation of objects and command structures
- Properties of Active Directory objects are taken over to Microsoft Visio
- Smooth integration of the Add-In into Microsoft Visio
- All Microsoft Visio export and reporting features are available
- NetDoc AD is "Verified for Microsoft® Windows® XP"

NetDoc AD: Five good reasons

1. DataAssist NetDoc AD 2.0 gives you a quick overview about structures, objects and containers of your active directories thanks to a graphic output in Microsoft Office Visio 2003 Professional.
2. NetDoc AD provides all essential information to you, because all objects and containers are read out with all their properties which in turn can be faded in at will and which can be printed out together with your documentation.
3. Via NetDoc AD you gain data that directly help you on expanding or modifying your active directories, i.e. which users are included in which user group.
4. NetDoc Ad can be installed and operated on each machine which has access to the domains to be documented. With the Multi Domain Version, the PC must not even be member of that domain.
5. Documentations generated with NetDoc AD 2.0 can be opened, printed or exported with each machine that has Microsoft Office Visio 2003 Professional installed. This is also true for an HTML page export.

DataAssist NetDoc Product Family

DataAssist NetDoc AD Versions			
	NetDoc AD SingleDomain	NetDoc AD MultiDomain	NetDoc AD Single Domain SE
Scandepth Elements	Unlimited	Unlimited	50
Scandepth Domain	1	Unlimited	1
