Palm m500/m505 comes with SD/MMC card slot. However, the device does not act as a SD/MMC card reader. Upload JPEG files to the device could be a problem.

Very smartly, **Palm Desktop** that comes with **PalmOS 4.0** provides a feature that allows users to upload JPEG files to SD/MMC cards via **HotSync**. This feature is not commonly known as it is not mentioned very clearly in the manual.

To upload JPEG files to SD/MMC using HotSync, simply do the following steps:

1. Open Palm **Install Tool** application. It can be found under Windows Start menu.
2. Add JPEG files to the window by **drag-and-drop JPEG files** to the window or using **Add** button.
3. Make sure the selected Palm user has the Palm m500/m505 device.
4. Click Done button.
5. Make sure SD/MMC card is inserted in Palm m500/m505 device.
6. Perform HotSync. After HotSync is done, the JPEG image files should be on the memory card.
7. The uploaded JPEG file should be under /DCIM/ on SD/MMC card.
