

Pick-N-Go v 1.0

This is very simple program designed with simplicity in mind. It will be your everyday groceries shopping list builder.

It will help you to prepare and remember what you have to buy while you are in the store/supermarket.

First, you have to start build up the item list. Next, you have build up the store list where you visited most.

Then you can start to create your list. It is based on date and store. Each list can have max. 33 items in it, but you can create unlimited list.

In the list builder screen, you can filter the records by store and a running total will show how much money you spent on specific store.

There is no price for each item and therefore the program won't calculate the total for you instead you just put the total amount from the receipt.

All the records are sorted by date in descending order.
