

Planimeter II

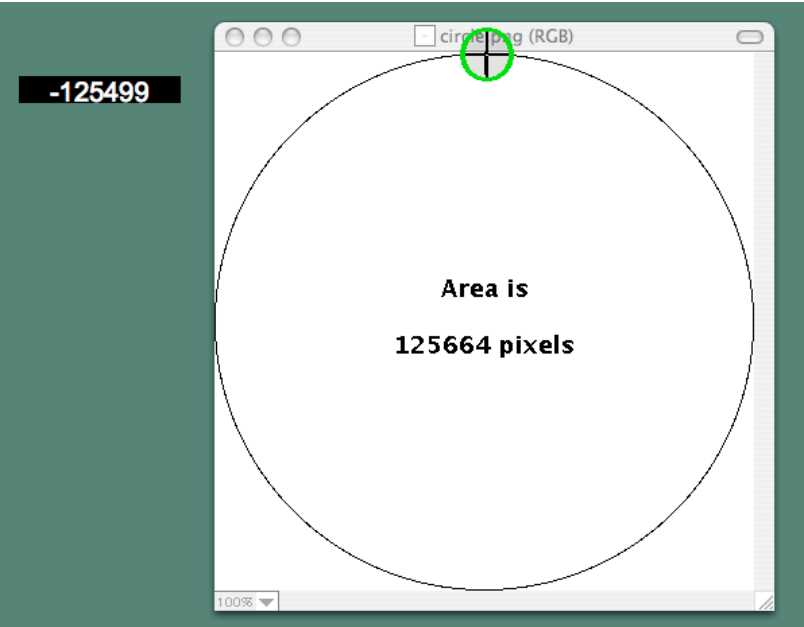

Version 2.0 14 February 2007

Summary

A planimeter is a mathematical instrument which is used to measure the area of a closed curve.

This Widget can be used to measure the areas of closed curves on the computer screen.

Description

To measure the area of a closed curve, place the tracer cross onto the curve, reset the counter, then drag the cross once around the curve.

The counter gives the area enclosed by the track of the tracer cross.

The area is expressed in units which relate to the ruler scale in force. The units are indicated in the counter tooltip.

Scale	Area Units
in pixels	(square) pixels
in centimeters	square centimeters
in inches	square inches
architect's scales	square feet
