<Basic Explanation>
New label management software that sorts files by adding labels and stars to them.

<Usage Conditions>
In order to use FenrirFS it is necessary to agree to the software license agreement.
The license is located in the License.rtf file. Please make sure to carefully read
through it.

<Distribution Conditions>
The redistribution of archives other than official versions is not permitted. For more information
regarding official versions, please refer to the License.rtf file.

<Installation>
Please execute the installer.
Execute the FenrirFS.exe file in the Installation Folder, and start FenrirFS.

<Uninstallation>
You can uninstall FenrirFS from the control panel.

<Main Modifications in Version 2.4.9>
* Fixed the issue that you could not remove labels and smart folders by using right click menu
* Improved stability of Twitter authorization by adopting OAuth
* Enhanced the serach box so that incremental search became available during kana-kanji
conversion
* Added shortcut keys CTRL + ";" and CTRL + "-" to change size of image previews and files
* Supported migemo search on label in-place edit
* Fixed some minor problems

<Main Modifications in Version 2.4.8>
* Resolved a security issue with bitmap files.

<Main Modifications in Version 2.4.7>
* Floating point calculation errors occurring when displaying OAuth authentication dialog fixed.
* Twitter API Version 1.1 support added.
* Actions becoming unstable when a large number of thumbnail images are displayed fixed.

<Main Modifications in Version 2.4.6>
* Authorization method when uploading to Evernote changed to OAuth.

(The OAuth authentification dialog is displayed on the initial upload after updating.)
* Sorting of item list view of items in ZIP files changed to by file name.
* Scroll distance when using mouse wheel on label lists / smart folder lists adjusted.

<Main Modifications in Version 2.4.5>
* File searching by inputting Roman characters in the search box made possible.

* Support added to modify the file search settings from the right-click menu of
  the search box magnifying icon.

* Support added to use regular expressions in searches by modifying the file search
  settings.

* An equivalent function to the Susie plug-in for viewing ZIP files has been
  implemented as standard so you can now view the contents of ZIP files without having to
  install any plug-ins.

* Modifications made to apply processing on actual files when drag and dropping aliases
  from FenrirFS.

* Modifications made to apply processing on actual files when performing
  copy and cut operations on aliases.

* Modifications made to not try and re-attempt synchronization when the sync
  destination folder does not exist when opening the auto-sync mode profile.

* Modifications made so the image quality settings can be modified from
  the right-click menu of image preview.

* Issue where thumbnail rendering would be out of place by 1 pixel in
  Windows XP environments fixed.

* Issue where thumbnails would not be rendered properly in Windows Vista 64bit
  environments fixed.

* Option added to the auto-sync mode profile to not watch files in sub-folders.

* Option added to the auto-sync mode profile to only attach labels of folders
  directly above.

<Main Modifications in Version 2.4>
* Image spread view function implemented so that images can be aligned and
  displayed in groups of 2 images.

* Switching to slide show view from image preview made possible.

* Quickly creating items made possible with [Add label/Add label group]
  in the right-click menu of the label list.

* Quickly creating items made possible with [Add smart folder/
  Add smart folder group] in the right-click menu of the smart folder list.

* [Apply to existing files] option added to create/edit file automatic sorting
  settings so that you can immediately apply the effects to existing files when
  updating the automatic sorting settings.

* Creating labels from the label selection menu of the automatic sorting filter
  creation/modification dialog made possible.

* [Actual size] / [Fit to screen size] setting added for full-screen view so that images
  smaller than the size of the screen can be enlarged and displayed.

* Issue where operations when using the mouse wheel would be unstable
  depending on the mouse used improved.

* Issue where restoration of window positions on start up in multi-screen
  environments would not operate properly improved.

* Switching to full-screen view by double clicking in the displayed area made
  possible when images are being displayed in the preview pane of wide-screen
  view or Quick Preview.

* Issue where items in the same position could not be selected with the mouse after
  deleting items from the label list / smart folder list improved.

* Issue where images in specific formats In Windows 7 could not be displayed
  properly fixed.

<Main Modifications in Version 2.3>
* Support for Susie plug-in, and extension support for image preview function added.
  It is required to place the Susie plug-in a specified location.

    [7、Vista environment] C:\Users\<User name>\AppData\Roaming\
                           Fenrir Inc\FenrirFS\plugins\susie
    [XP environment]   C:\Documents and Settings\<User name>\Application Data\
                           Fenrir Inc\FenrirFS\plugins\susie
    [Portable version]   <FenrirFS.exe location>\plugins\susie

    You can set to a location of your choice by adding the text below to
    <Profile folder>\settings\setting.ini

    [Plugins]
    SusiePluginDir=<Folder which contains Susie plug-in>

* You can now preview files in archives when you install Susie plug-in supporting ZIP and
  other archive file formats.

* Full screen display support for image previewing added.

* Operability improved by also displaying files with child group labels attached in
  the file list when selecting label groups.

This function can be turned off by adding the text below to the config section of
<Profile   folder>\settings\setting.ini
[Config]
...
FileSelectIncludeChildLabelGroups=0

* Issue fixed where moving of label groups by drag and dropping in label lists
  would not work has been fixed.

* The dialog box of the automatic sorting settings for files can now be resized.

* Movements improved so that selected items do not change when the arrow icon in
  label lists/smart folder lists are clicked.

* Issue where methods of part of the FenrirFS API could not be used from the scripting
  language has been fixed.

<Main Modifications in Version 2.2>
* Chinese has been added as a selectable language in Environment Settings|General|Language.

* Management has been made easy even when there is a high item count by adding
  a function to create sub-groups for label groups.

* Function to decide the font being used by checking the effectiveness of clear type in
  the system settings.
  Also, if Meiryo is installed for XP, and clear type is enabled, Meiryo can now be used
  as a displayable font.

* Functionality reliability has been improved by fixing the issue where the image
  directional information is not correctly reflected when displaying image files in
  the Quick Preview window.

<Main Modifications in Version 2.1>
* Languages can now be changed from: Environment Settings | General |
  Display Language
  Currently, Japanese and English are supported.

* Option to upload images to Facebook, Twitter related image sharing sites,
  and Evernote has been added to the right-click menu of file list.
  (It is also possible to upload files other than images to Evernote.)
  (Account settings can be modified from Enviroment Settings | Twitter and
  Environment Settings | Evernote.)
  (When trying to upload to Facebook while not logged in,
  a verification dialogue is now displayed.)

* Improved operation to rectify and display thumbnails and previews
  when photographs taken with a digital camera or smartphone include
  information about the image direction.

* A dialogue box for selecting the location of the profile folder is now displayed,
  allowing the user to select the correct location of the profile folder,
  for when the profile folder could not open properly when starting up.

* Usability has been improved by making it possible to memorize the selected
  position of labels and smart folders for each profile.

<Main Modifications in Version 2.0.3>
* The problem where labels, comments, and other information are deleted for certain applications
  when updating files in the automatic synchronization mode profile, has been rectifed,
  and reliability has been improved.

* The problem where after performing a search from the search box, the focus position of file
  list items did not reset, has been rectified, and improved.

* The problem when the label list is displayed in flat-view, where successive
  operations of the arrow that opens and closes label groups could not be done by
  clicking the mouse, has been rectified, and reliability has been improved.

* Processing of run arguments when ran from Sleipnir 3 has been improved.

* The problem where unnecessary "&" character was being displayed in each
  item in the display mode selection menu has been rectified, and reliability
  has been improved.
