PRIMA **Password Case**

- Quickstart English-

Release 1.02

Content

Licence information

Please read these chapter carefully BEFORE using this software!

The program „PRIMA Password Case" (or short also "PrimaPWB" or „PWB") is the property of the author Jens Wahl.

This licensing agreement with liability limitations is a legally binding contract („Licence agreement") between you as user as a natural or legal person („User") and the software author Jens Wahl („Author") in question to the above named software product „PRIMA Password Case". This includes all additional files to this software.

Content:

1. Terms of a licence
2. Licence type and retransmission of the software
3. Safety Copies
4. Copyright, warranty and liability limitations
5. Final clause

1. Terms of a licence

The usage of this software is only allowed if you agreed with **all terms** of this licence agreement. Your compliance is manifested if you have installed the software or you use it. Without your compliance there is no contract between you as user and the author.

2. Licence type and retransmission of the software

The program PRIMA Password Case is freeware and may be freely used, copied and passed on, if the following conditions are met:
• The full program for both private and business purposes may use for free. EXCEPTION: The usage of this software in applications or systems, in which malfunctions of this software as far as it is humanly possible can create bodily injury or bodily harm with fatal consequences is not allowed! The usage of this software in such environments is out of this licence agreement. Every liability of the author is excluded for damages or deficits because of such a not allowed usage. If the author get knowledge of offences against this licence agreement he can deprive you the licence to use this software for all time.
• You can use the program but not offer it for sale as a single program or bundled with other software.
• You may not offer the program on a fee-based website for free download.
• For all other types of publication, a written authorization (letter personally signed) is required by the author, this permit may be charged. You have NO right to grant such permission.
• The program will also transfer to third parties ever owned by the author.
• The program must not be altered or decompiled, in particular, the program name and the name of the author may not be changed.
• The author remains the owner of all rights to the program.

<u>3. Safety Copies</u>

Every licence holder has the right to create one or more copies for saving reasons.

It is strongly recommended to create data backups of the software.

<u>4. Copyright, warranty and liability limitations</u>

This software is Copyright © by Jens Wahl, Rosenheim. All rights reserved.

The program is supplied "as is" without warranty of any kind
The user accepts that the use made of the program and its services and documentation at their own risk / own risk.

THE AUTHOR DOES NOT WARRANT:
1. That the program is free of errors.
2. That the program is working without interruption.
3. That the program meets your needs.
4. That software errors will be corrected, that the program will be adapted to specific conditions or that new versions / updates of the program are provided.

There is no warranty for the functionality.
For damages resulting from the use of the program (e. g., data loss, business interruption, loss of earnings and other financial losses), the author accepts NO RESPONSIBILITY, even if the damages were foreseeable.

The software is virus detected. But it lies in the liability of the user to run virus detection on its computer(s) periodical, especially after the download. The author is not liable for such damages.

The usage of this software in applications or systems, in which malfunctions of this software as far as it is humanly possible can create bodily injury or bodily harm with fatal consequences is not allowed! The usage of this software in such environments is out of this licence agreement. Every liability of the author is excluded for damages or deficits because of such a not allowed usage.

if the user downloads or installs this software, the user agrees with all terms of this licence agreement. Hence, these are announced during the installation in the same text to begin with. In addition, this file can be downloaded with the licence terms apart from the installation routine and can be read before the installation.

5. Final regulations

Changes of this licence arrangement need the written form and must be signed by the user and the originator.
Should parts of this licence arrangement be ineffective or unenforceble or become, from this the effectiveness and enforceability of the remaining regulations of this licence arrangement is not touched. In this case the parties undertake to agree on an effective regula-

tion instead of the ineffective regulation which comes to the economic purpose of this licence arrangement so near as possible.

It is worth the right of the Federal Republic of Germany. Legal venue is Rosenheim / Upper Bavaria.

What can I do with the „Password Case" (PWB)?

A program for the central management of passwords, PINs and PUKS (you can use it on portable memories like usb stick, SDHC card).
In february of 2015 I had forgotten my login data for a download portal. This is the reason why I started to develop this program - now I have to know only the Windows-Login and the Master-Password for my Password Case. So I have all my passwords in one application with a relatively good safety.

Properties / functions of the Password Case:
• Password protected access
• A random number of users can register, everybody sees only the own entries
• Save login name and password or for mobile phones / cellphones PIN, PUK und PUK2
• Assign your entries to a category which you can define yourself
• Copy the password into the clipboard, after it the content of the clipboard will be auto-matically deleted by a timer
• Reminder for passwords with an expiration date
• The entries will be saved in an encrypted database (Rijndael 256)
• If the database was hacked: the passwords in it will be saved encoded
• The transfer of the passwords on reading from the or writing into the database is encrypted
• The passwords will be only copied (otherwise you insert it directly by the keyboard) - bad for keyloggers
• The display of passwords in plain language can be protected by asking for the Master-Password
• A function for creation of safe passwords
• Some printing functions

Tip: This application already includes 3 internal skins. This means that you don't have to install the skins before starting this program. Only if you want to choose another ski you have to install this extra download file on you computer. Please read the notes for installa-tion the skins in the download area!

The term "PRIMA" is to identify a number of freeware and shareware program that I will develop gradually and is an abbreviation for "**Pr**ivate **Information Ma**nagement", which of course means "management of private information." This means that the applications of the PRIMA-series were/will be designed for private use. The using in commercial area is al-so allowed by the licence but there will not be an optimisation for business processes!

On using this software there will no other software be hidden installed or without any question. There are no banner ads in my program too.

Tip: Beginning with release 1.01 the program was renamed into "Password Case" (before "Password Box") because of legal grounds. I wanted to avoid problems with Passwordbox.com.
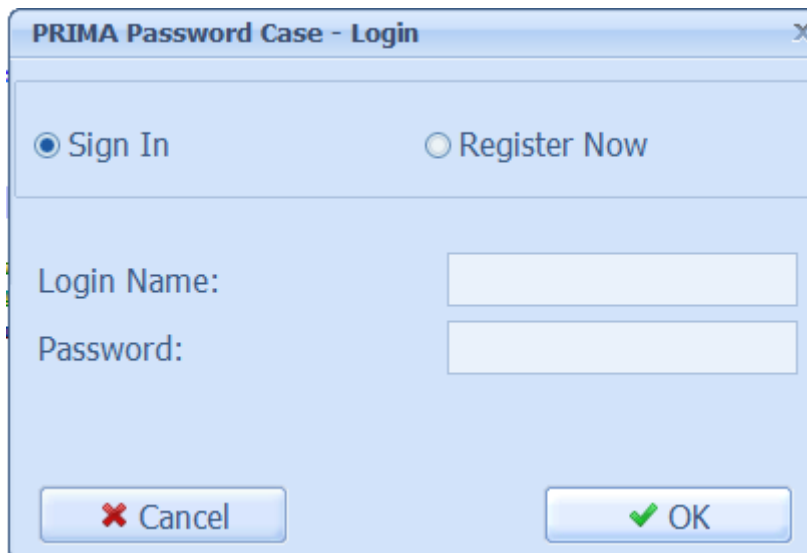

Installation

The program was tested under Windows 7 64 bit and Windows 8.1 64 bit.
With tests in the Virtual fashion with XP there were skin problems. Use so the program please only from Windows Vista or above!

There is no installation file for this program. Easy unpack the file PWB_EN.7z or PWB_EN.zip into the wished folder and you can start. So you will get also the possibility to use it portable on an USB-stick or on a SDHC card.
The only one difference between the files PWB_DE.7z und PWB_EN.7z (also between the PWB_DE.zip und PWB_EN.zip) is, that the named language is default (on the DE-files German, on the EN-files English). But you can change the language in the options when ever you want it.

On starting the application you will see the login window:

PRIMA Password Case - Login   x

◉ Sign In   ○ Register Now

Login Name: [   ]

Password: [   ]

[✖ Cancel]   [✔ OK]

On the first start you have to choose „Register Now" and fill in your Login name and two times your Master-Password - this you must keep in your mind very good! If your input is correctly you will be registered as a new user. If there were problems the application will end after a message.
On every next start you let the default on „Sign In" and insert your Login name and your Master-password.

A random number of users can be registered but only 2 can use the program at the same time (to keep the database size small). Every user sees only „his / her" entries (passwords, categories). All settings are related to the user but NOT the language.

Settings

While finishing the program the topical skin as well as the window und splitter positions are automatically stored and put by the next program start again.

All made changes depends from the user.

In the options (<Ctrl> + <T>) you can carry out the following settings:
You can change the skin and choose a language (German or English), you can set a path to the eBook - that's all for the most programs by me. Espacially in this program there are another settings:

- Asking for the Master-Password for the display of passwords, the copy into the clipboard and for printing
- Insert the seconds to overwrite the clipboard after copying a password into the clipboard (this runs independent from this setting on every program end)
- Change the Master-Password

a) Choice of another Skins. If you have installed no other Skins, only two internal ones are available to you.
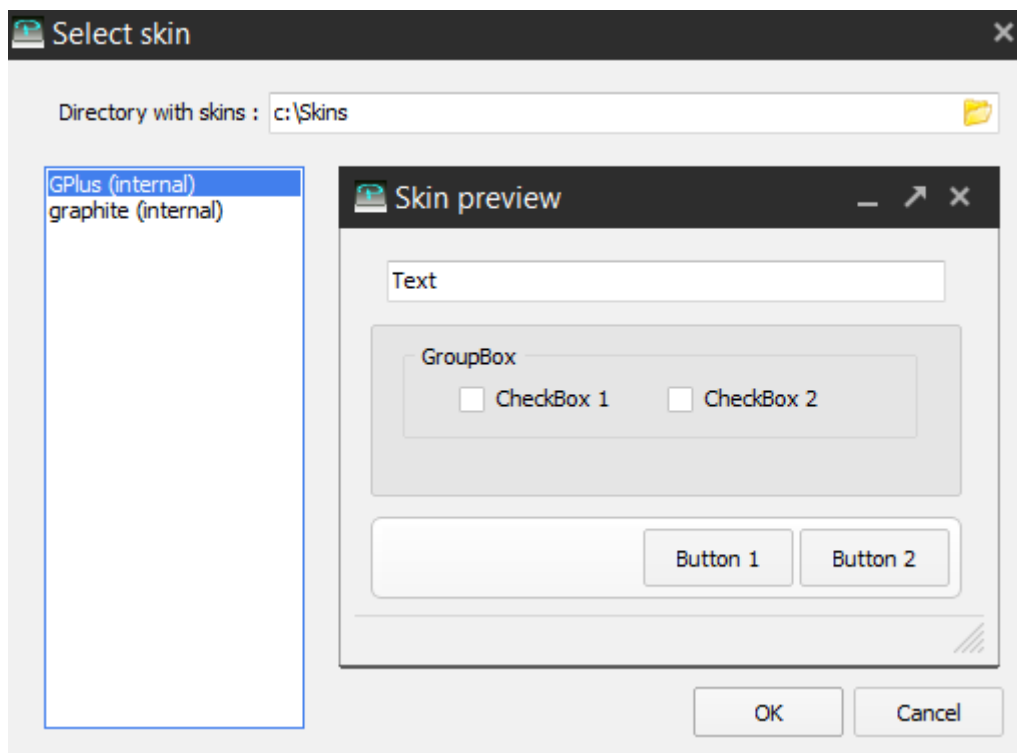

Otherwise you select the folder in which you have installed the Skins (about "Directory with Skins") and then have everybody installed plus the internal Skins for the choice.
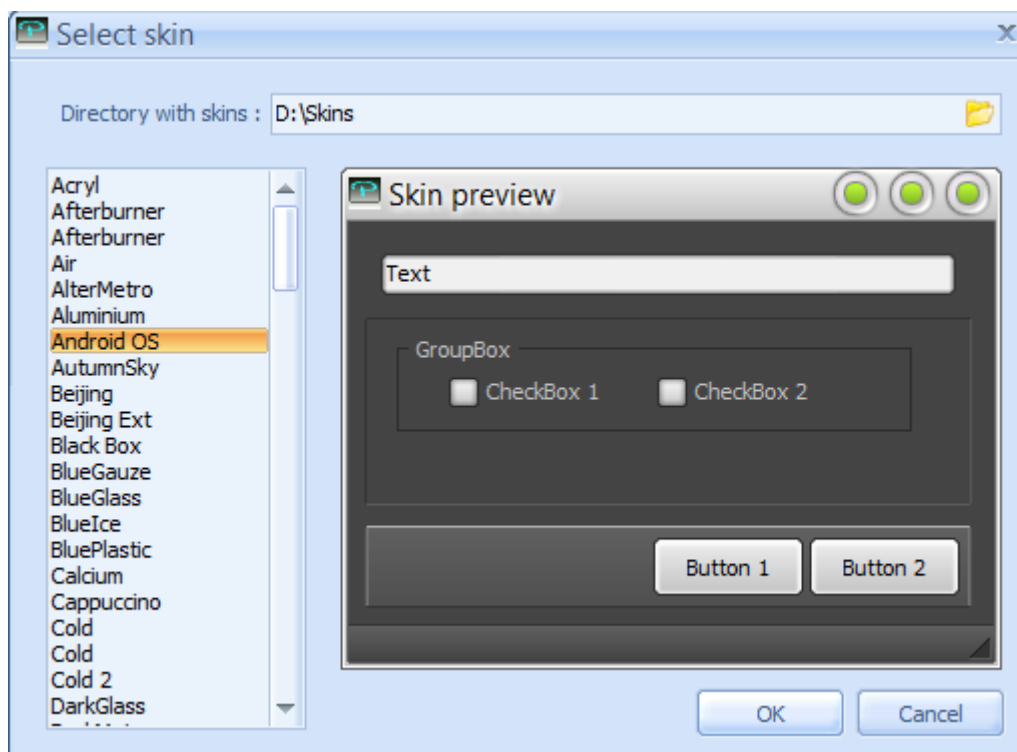

After click on "OK" in the skin choice window the new skin is indicated immediately. This change works immediately and must not be confirmed in the option window again with "OK".

b) Change language:
In the combo case are available normally only German and English. All visible windows are "altered" immediately by choice of the language. This change works immediately and must not be confirmed in the option window again with "OK". For other languages see appendix C.

c) Path to the eBook:
To this program there is an eBook available. Should you have bought it, you can set the path to this here. This eBook you can start from the program by <Ctrl> + 1. Of course you should have installed a suitable eBook reader!

Lock program

If you leave your PC you should end or minimize your Password Case:
The program icon will be removed from the task bar and it will be shown in the System-Tray (in the taskbar left of date and time). If you click with the right mouse button you will see a small context menu: "Restore" and "Close".
Clicking with the left mouse button on the "Restore" menu item will show the password case again - after inserting your Master-Password correctly. This is independence from your settings!

Program information (About...)

Shows the window „About" with program information (it's possible by the main menu „About...").

In the list on the right hand side you can read the version of the AlphaControls (in the picture: 9.19). This is important if you liked to download yourselves additional skins, because the version number (at least of the number must agree on the left before the point, so here 9) with that of the skins.
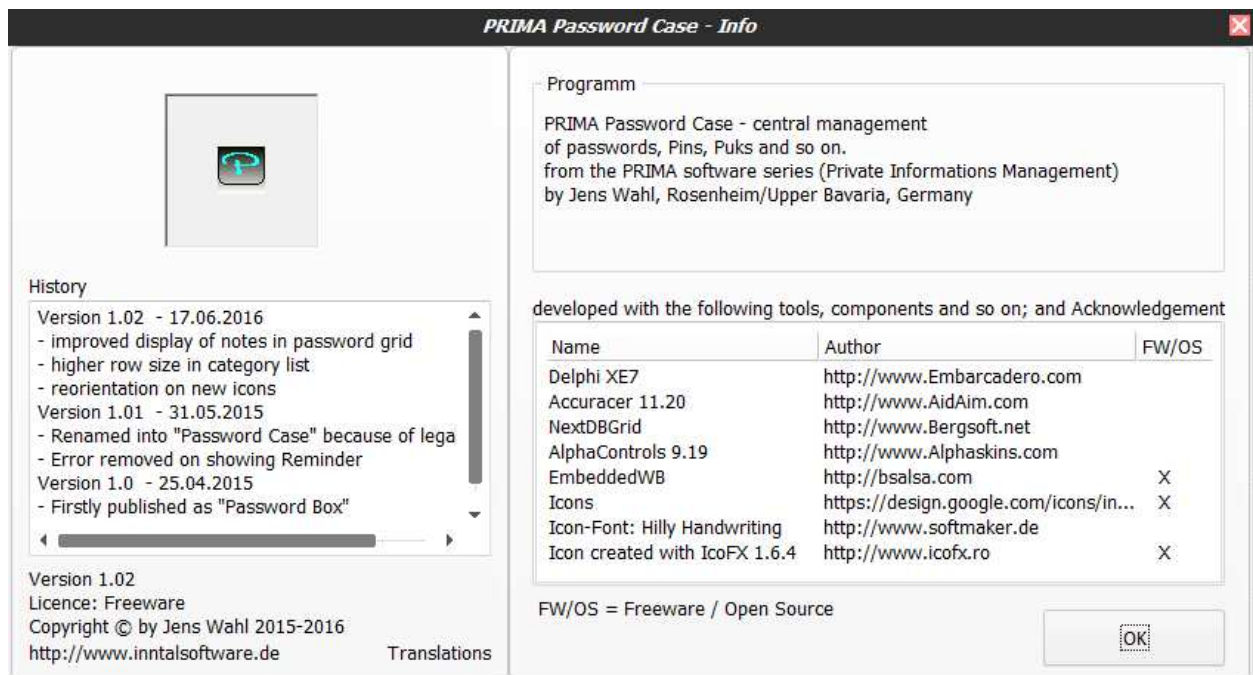

Error Handling

If you have a problem or an error occurs than please send an e-mail to support@inntal-software.de with „PrimaPWB" in the subject (or use the „Send an e-mail to support"-Menu-item in the main menu).

- Used operating system
- On which function occurs the error

It's also possible to send me an e-mail with wished functions.

eBook for the „Password Case"

If you wanted detailed instructions for almost all available functions of this program and/or you should like this program and you would like to promote his advancement, then, nevertheless, you buy the available eBook. With it you receive, in contrast to a donation button, a real equivalent.

To the „Password Case" there is one eBook available in the formats epub and mobi.

You find further information about it on my eBook-web page under www.jw-ebooks.de/password-case.html

Appendix A: List of Icons and Shortcuts

| Icon	Shortcut	Description
	Strg+N	creates a new password record
	Ctrl+O	opens a saved password record
	Ctrl+Entf	deletes a saved password record
	Ctrl+G	creates a new password
	ESC	Cancel (closes the window without saving)
	Ctrl+C	copy the password (PIN, PUK, PUK2) into the clipboard - read the tip on pointing with the mouse onto the „PW Copy"-Button
	Ctrl+S	saves your changes and close the window
		creates a new category from the password-editing-window
	Ctrl+U	opens an internet address (URL) in the browser
	Ctrl+M	creates an e-mail with the shown address
		displays the password (PIN, PUK, PUK2) in plain language (decoded), if checked in the settings after asking for the master-password
	Ctrl+P	print a password-list oder category-list with preview
	Shift+Ctrl+N	creates a new category record
	Shift+Ctrl+O	opens a saved category record
	Shift+Ctrl+Entf	deletes a saved category record
	Ctrl+E	displays reminder

|		
	Ctrl+T	opens the window for settings / options
	F1	opens the QuickStart document
	Ctrl+F1	opens this document
	Ctrl+1	opens eBook if a path was saved in the settings
	Ctrl+Q	closes / ends the program

Appendix B: Translations

If you like this program but it's not in your language then you can translate it yourself if you want. Here is a description for it:

- Create a copy of the file PrimaPW_DE.lng or PrimaPW_EN.lng (which you want to take as source for the translation into your language). Rename the copied file: replace the country code DE or EN with yours (e. g. in PrimaPW_ES.lng for Spanish, exactly 2 letters as country code!).
- Open the renamed file in a text editor (e. g. Notepad++ or SynWrite) and translate all values (words, sentences) on the right hand side of the equal sign (e. g. from English into Spanish):
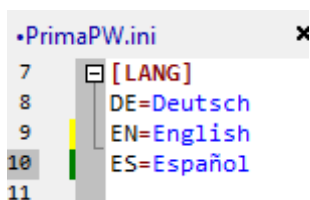

```
•PrimaPW_ES.lng        ×   +
23
24     [fLogin.actLoginCancel]
25     Kind=10
26     Caption=Cancelar
27     Hint=Discards all changes
28
```

- Save your changes.
- Open the file PrimaPW.ini with a text editor and add an entry with your language in the [LANG]-section:
  old:

```
PrimaPW.ini        ×
7     [LANG]
8     DE=Deutsch
9     EN=English
10
```

  new after inserting of Spanish:

```
•PrimaPW.ini        ×
7     [LANG]
8     DE=Deutsch
9     EN=English
10    ES=Español
11
```

- Save and close the PrimaPW.ini.
- Start the „PRIMA Password Case" and open the Options (<CTRL>+<T>).
- Choose your language.

Please make short texts in the program. Otherwise it's possible that the text is cutted.

Who want to translate the manual but not from the PDF-file can get a document in the following formats (send an e-mail to me):

Softmaker Office Textmaker	.tmd	original format Textmaker-Release 2012
Softmaker Office Textmaker	.tmd	for Textmaker 2006 or 2008, please tell me your used Textmaker-Release

Microsoft Office Word	.doc	for Word 97/2000 or XP/2003
Microsoft Office Word	.docx	Word 2007 and above
OpenOffice Writer	.odt	tested only with Release 3.2

Please tell me what format you want to use.
Also please tell me the language into you want to translate. So I can coordinate parallel translations into the same language (if exists). This is also important for program translations.

Who wants it can send me the program- and/or manual-translation. In the next release all users can use it and your name will be published as translator (if you want this).

Tip: The program knows unicode!
