

# RSV123

Thank you for your using RSV123.

## 1. Introduction

**RSV123** is a simple solution to managing hotel room reservations. Register any number of rooms and customer records. And you can book reservations at the present time and in the future. When you select two dates (start date of stay and end date of stay), RSV123 will automatically present you with available rooms for that span. Click on the Previous date button and Next date button to see which rooms are filled on a particular day.

## 2. Installing RSV123

Double-click on **setup.exe** in the delivery package initiate the installation process. If your computer doesn't have it yet, RSV123 will first attempt to install **.NET Framework 4**, and you will be prompted for confirmation. (See Screenshot 2.) Then you will proceed to install RSV123. You can use **Setup.msi** to install the application as long as you already have .NET Framework 4, which RSV123 requires. You can find the application at the following path: C:\Program Files\MacHouse\RSV123.

When you launch the application, you will see a status message in red at the bottom of the window. This application requires a database file to begin with. So choose Help > Download data file to download it. (See Screenshot 3.) Then click on the status message, and you will be prompted to locate the database file. After successfully letting the

application copying the file, restart the application.

Furthermore, note that this application requires Microsoft Access Database Engine 2010 Redistributable (64-bit) to read the Access database file. If your computer doesn't have Microsoft Excel or Microsoft Access installed, you may be required to download the database engine installer from Microsoft's web site. And you will be prompted to download the installer package when you launch the application.

### 3. Uninstalling RSV123

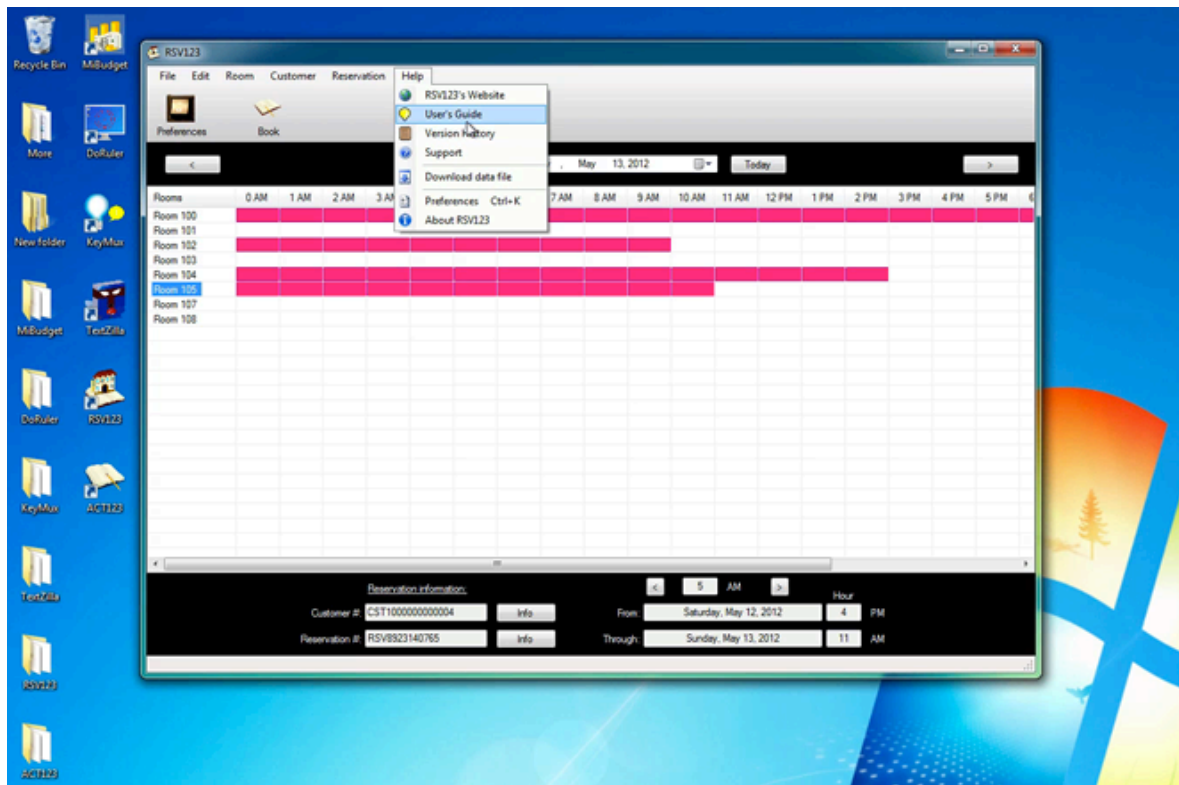

Open Control Panel and choose Uninstall a program. Then double-click on RSV123 to initiate the uninstalling process. (See Screenshot 3.5.) You can also use the original setup.exe or setup.msi to uninstall the application. (See Screenshot 4.) Additionally, when it starts up for the first time, the application will create a folder, which you need to manually trash. You can locate it easily by opening Preferences and navigate to the System tab.
