

ScreenScanner 2012 Product Description

Background

ScreenScanner2012 is a simple computer Windows software designed by weahiring that allows you to scan (or capture) computer information on the screen (or part thereof) without using a physical scanner or camera. This scanned information is then saved in a picture format of your choice to a folder (directory) of your choice. This picture can thereafter be used in various ways. Some of the ways include inserting them in documents like reports, presentations, system user training manuals, customer help desk complaints and solutions, and other complex ways like online newspaper cuttings and many more.

System Requirements

ScreenScanner2012 requires the following to run efficiently:-

Desktop personal computer or laptop

Microsoft Windows XP or later version with the following:-

Microsoft .NET framework 4 client profile (x86 and x64)

Microsoft Windows installer 3.1

1GB or more of RAM and 1GB or more free disk space

How to use ScreenScanner2012

Start *ScreenScanner2012*. *ScreenScanner* will select the top left quarter of the screen and show you the screen coordinates. The system will allow you to change this selection by entering different screen coordinates. These coordinates include the starting and ending horizontal positions (width) and the starting and ending vertical positions (height). Any time you can check which area you have selected by clicking on the **what area?** button. If you click on this button, the system covers the selected area with a transparent sheet (*ScreenScanner Selector*). You can also move the *ScreenScanner Selector* around to select a different area, or resize it by stretching it from the bottom right corner. If you are happy with your selection, you can see how it looks like by clicking on the **Pre-Scan** button. This will bring a print preview window where you can magnify the picture. Once this is completed, close the preview window and you are ready to scan. Enter the name to give the file (without extension). Select the type (format) of the *scanphoto* that will be saved. You can choose between the five most common types (*bmp*, *gif*, *jpeg*, *png*, and *tiff*). Next you enter the folder or select the folder where the *scanphoto* file will be saved. Next you click on **ScreenScan** button to scan. The system will give you a success message. Check for the *scanphoto* file from your selected folder and enjoy using it.

Installation

1. Download *ScreenScanner2012.zip* from www.weahiring.com or any other partner sites.
2. Unzip *ScreenScanner2012.zip* to any folder of your choice on your computer
