# SimplePics

Thank you for your using SimplePics.

1. Introduction

SimplePics is a simple Windows application that you can use to take desktop screenshots. Of course, it could just be the matter of pressing Print Screen to take a screenshot in Windows unless you want to include the Mouse pointer. Using SimplePics, you can define a partial desktop region by choosing Top-left, Top-right, Bottom-left, Bottom-right from a drop-down menu on top of the ability to include the Mouse pointer to the screenshot.

2. Installing SimplePics

Double-click on setup.exe in the delivery package initiate the installation process. If your computer doesn't have it yet, SimplePics will first attempt to install .NET Framework 4, and you will be prompted for confirmation. (See Screenshot 2.) Then you will proceed to install SimplePics. You can use Setup.msi to install the application as long as you already have .NET Framework 4, which SimplePics requires. You can find the application at the following path: C:\Program Files \MacHouse\SimplePics.

3. Uninstalling SimplePics

Open Control Panel and choose Uninstall a program. Then double-click on SimplePics to initiate the uninstalling process. (See Screenshot 3.) You can also use the original setup.exe or setup.msi to uninstall the application. (See Screenshot 4.) Additionally, when it starts up for the first time, the application will create a folder, which you need to manually trash. You can locate it easily by opening Preferences and navigate to the System tab.
