

SyncFolders Manual

Explanation:

Remark:

SyncFolders will hide in the system tray . If you click on the icon:  the above screen will appear.

1. Overview of synchronization

In this area you will see what has happened during synchronization. You will see when a file has been copied.

2. If you want to synchronize click on this button

The synchronization will start immediately. Normally in the settings section (6.) you can also setup automatic synchronization.

3. Setup synchronization time.

Here you can specify at which time the synchronization will start. The program will hide in the system tray and if the time you have set-up is

equal to the current time the synchronization will automatically be performed. If there are drives which on that moment are not accessible these drives will be skipped.

4. Overview of your directories for synchronisation

Here you will see all your directories for synchronization. You can select one of them and can alter the setting.

5. Add/edit/delete one of the synchronization directories

With the button bar you can add a new synchronization directory, edit the selected one or remove the selected one.

6. Setup a synchronization directory

Here you specify the from directory (use the  to select a from directory). You can also select the to directory. Make sure you always use a directory instead of a drive. Because the process works for both directories, all directories and files will be copied.

(7.) With the **'Copy files from 'From directory' to 'To directory'** you specify that all the files/directories found in the 'From directory' will be copied (if they are newer then the one found in the 'to directory').

(8.) With the **'Copy files from 'To directory' to 'From directory'** you specify that all the files/directories found in the 'To directory' will be copied (if they are newer then the one found in the 'from directory').

Hit save to save these settings.

Upgrades: Your license will never expire!

If you need an upgrade just visit www.thebestsoftwaretools.com and download the upgrade version.

INSTALLATION/UPGRADE INSTRUCTION

WWW.THEBESTSOFTWARETOOLS.COM

INSTALLATION UPGRADE

You have downloaded the upgrade.zip. Extract it in the same directory as where you have installed the full-product.

It will now overwrite (hit yes) the old product. The update is now active!

Enjoy!
