Save Options

11. This bar set the tradeoff between images save time when one click on save flipbook, the heier the value the longer it takes to save, our recommended settings are the default.

Layout

12. To many printers and cutters that our software support we enabled changing the layout of the images per page.

for the first that you will open video flip at your office you will have to find the right padding that fits your printer and cutter.

to do so go to:

Settings Tab -> Layout -> Enable Test Mode

then record and print flipbooks, it will print you 1 page with boarders and then you will be able to pass it through the cutting machine to validate perfect padding for each card.

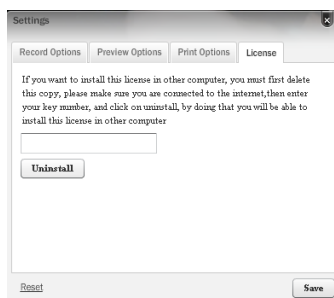

After the first print you will see a pop up that will tell you what video flip detect as your printer width and height. Go back to **Settings Tab -> Layout** and make sure that letter width and letter height are set accordingly, if not set them to the numbers you saw in the popup.

Now record again and print if it's not perfect countinue to play and adjust it with the padding top, padding left, padding right, padding bottom until you get a perfect result.

this you will only need to do once at the first time you print in your office, after finding the right paddings it will be saved forever and you ready to go.

this link will demonstrate how the layout adjustment works: <http://www.videoflip.co.il/example/VideoFlipCardExample.html>

License Option

13. If you want to install your license in other computer, you must first uninstall your license. Please make sure you are connected to the internet, then enter your key number, and click on uninstall, by doing that you will be able to install this license in other computer.
