## **SVN Web Client 2.5.0**

by [Polarion Software](#) - Fri, Apr 7th 2006 10:53 PDT

**About:** WebClient for SVN is a Web interface for Subversion (SVN) repositories. It offers a convenient way of browsing a repository's contents and its history, plus simple write operations. It can connect to SVN repositories that provide HTTP access (Subversion 1.1 and higher is supported).

## **Nullsoft Scriptable Install System 2.16**

by [Amir Szekely](#) - Fri, Apr 7th 2006 10:47 PDT

**About:** Nullsoft Scriptable Install System is a tool for creating quick and user-friendly installers for Microsoft Windows operating systems. It is a script-based system that adds a very small overhead, only 34 KB. It features LZMA compression, support for multiple languages, and an easy-to-use plugins system

**Changes:** This release greatly increases the portability of makensis by adding support for big-endian platforms. It also contains a collection of bugfixes, improvements,

and translation updates.

## **MySQL wrapped 1.6**

by [Grymse](#) - Fri, Apr 7th 2006 10:46 PDT

**About:** MySQL wrapped is a very small collection of classes that hides the MySQL C API.

**Changes:** This release adds methods to access fields by name.

<a href="#">Database</a> <a href="#">Software Development :: Libraries</a>	Minor feature enhancement	<a href="#">GNU General Public License (GPL)</a>	     

## **Yasm 0.5.0rc2**

by [Peter Johnson](#) - Fri, Apr 7th 2006 10:46 PDT

**About:** Yasm is a complete rewrite of the NASM assembler. It is designed from the ground up to allow for multiple syntaxes to be supported (e.g., NASM, TASM, GAS, etc.) in addition to multiple output object formats. Another primary module of the overall design is an optimizer module. Major features include x86 and AMD64 architecture support, ELF, COFF, and Win32 object formats, and STABS debugging output.

**Changes:** This release adds support for CodeView 8.0 source debugging (as used by Visual Studio 2005). DWARF2 source debugging has been fixed. -l support has been fixed to properly handle relative paths (now the search pattern is essentially identical to most C compilers). Standard macros have been added that provide version information. There are many other bugfixes.

## **MfGames.Template 1.1.0**

by [D. Moonfire](#) - Fri, Apr 7th 2006 10:45 PDT

**About:** The MfGames.Template library is a C# native library for creating template libraries. It was inspired by NVelocity, but was designed from the ground up to use the CIL internals, such as System.CodeDom and internal compilation to handle the template language. Because of this, it supports C# code as the template "language". In addition, compiled templates are actually compiled down into bytecode using the built-in compiler.

**Changes:** Templates may now be precompiled into a C# file, suitable for inclusion in the normal compile process. The < %# % > tag set has been added to allow the creation of template variables and additional methods. The < % @ % > tag set has been added for controlling the template at the template file level. Critical bugs with the < % = % > constructs have been fixed.

## **MfGames.Utility 1.3.0**

by [D. Moonfire](#) - Fri, Apr 7th 2006 10:44 PDT

**About:** MfGames.Utility is a C# library that contains various functions and frameworks, such as an auditing and logging framework. It also implements a Mersenne Twister as a random number generator, an entropy framework, and collections that use the framework for selection. The library also contains many useful classes to simplify code, such as an abstract reference system inspired from the Unix file system, additional conversion classes, and timing or animation managers. This library requires no additional packages or libraries beyond those supplied in Mono or .NET 1.0.

**Changes:** log4net has been merged as an optional compile. This release adds basic vector, matrix, quaternion, and euler rotation objects. The Auditable framework has been enhanced to allow for nested reporting of issues.

## **Va Temps 1.4.5**

by [Dominik](#) - Fri, Apr 7th 2006 10:44 PDT

**About:** Va Temps is a time-tracking tool that collects the time spent on several projects running concurrently. Each running project gets a fraction of the real time based on its priority and the number of running tasks.

**Changes:** This release fixes the annoying "visible beneficiary" bug that prevented one from setting a beneficiary link to a project or an activity. Both the project/activity creation and the beneficiary filtering have been fixed.

## **ALSA driver 1.0.11rc4 (Development)**

by [Moritz Barsnick](#) - Fri, Apr 7th 2006 10:42 PDT

**About:** The Advanced Linux Sound Architecture is composed of several parts. The first is a fully modularized sound driver which supports module autoloading, devfs, isapnp autoconfiguration, and gives complete access to analog audio, digital audio, control, mixer, synthesizer, DSP, MIDI, and timer components of audio hardware. It also includes a fully-featured kernel-level sequencer, a full compatibility layer for OSS/Free applications, an object-oriented C library which covers and enhances the ALSA kernel driver functionality for applications (client/server, plugins, PCM sharing/multiplexing, PCM metering, etc.), an interactive configuration program for the driver, and some simple utilities for basic management.

**Changes:** Several off-by-one errors were fixed. Support for older kernels was improved. Many drivers were fixed or enhanced.

## Stella 2.2

by [Stephen Anthony](#) - Fri, Apr 7th 2006 10:42 PDT

**About:** Stella is a freely distributed multi-platform Atari 2600 VCS emulator originally developed for Linux by Bradford W. Mott. Since its original release several people have joined the development team to port Stella to other operating systems such as DOS, OS/2, MacOS, Unix, and Windows 95 & NT.

**Changes:** This release adds a new 'filesystem-based' ROM browser mode. The ROM properties file has been integrated for faster startup. Settings and properties file handling has been reworked, and only saves to external files when necessary. An option has been added to turn off all visual tweaks for a more authentic look. 'Jitter compensation' for paddles on Stelladaptor has been added. There are various bugfixes to the debugger and snapshot code. A universal binary for the OS X port has been added. There are many changes for the GP2X port.

## audit daemon 1.1.6

by [Steve Grubb](#) - Fri, Apr 7th 2006 10:39 PDT

**About:** The audit package contains the user-space utilities for creating audit rules, as well as for storing and searching the audit records generate by the audit subsystem in the Linux 2.6 kernel.

**Changes:** This release adds new message types, supports the new rule format found in 2.6.17 and later kernels, and adds support for auditing by SE Linux roles, clearance, type, and sensitivity.

## SchilliX 0.5.2

by [Jörg Schilling](#) - Fri, Apr 7th 2006 10:38 PDT

**About:** SchilliX is an OpenSolaris-based live CD and distribution that is intended to help people discover OpenSolaris. When installed on a hard drive, it also allows developers to develop and compile code in a pure OpenSolaris environment. SchilliX tries to be as Sun Solaris compatible as possible and to be the optimum development platform for Solaris and OpenSolaris.

**Changes:** Updated to use OpenSolaris Nevada Build 36. An SVr4 package database for the content was added (although the build process is not yet based on pkgadd). This allows you to install most binary packages from Blastwave.org. The DHCP eventhook can deal with multiple DHCP networks on multiple interfaces.

## **Open Project Services 0.2**

by [Ivo van Dongen](#) - Fri, Apr 7th 2006 10:37 PDT

**About:** Open Project Services (OPS) is a project communication and collaboration platform. It ties together open standards for email, calendars, timesheets, contacts, documents, and more, with project information, using COTS clients and servers.

**Changes:** This release includes some changes to the underlying LDAP schema to make it possible to disable tasks when they are completed. To make use of this new feature, the Web services and the sunbird timesheet client have to be updated.

## **Jedi 0.7.5**

by [Eric de Boer](#) - Fri, Apr 7th 2006 10:37 PDT

**About:** Jedi is a Java Jabber client that supports most chat features such as file transfer, group chat, emoticons, and formatted messages. It can be used as an application or as a Web applet.

**Changes:** This release adds a background image in the main window. It fixes a no reconnect on disconnect problem, and sorts emoticons and emoticon window closes on selection. The XMPP URI and the system tray work on Linux. The alert window has colors for different types of events. Auto-connect has been improved. This release adds Ctrl-t to advance tabs and Ctrl-Shift-t to go back. SRV support has been added. STARTTLS and SASL resource binding and session initiating have been added. There is HTTP proxy support through HTTPS connect. Connection error detection has been improved.

## **Webminstats 0.10.1**

by [Gerbier Eric](#) - Fri, Apr 7th 2006 10:34 PDT

**About:** Webminstats is a Webmin module designed to store system information in an rrdtool database and to display historic (hourly, daily, weekly, monthly, and custom) graphs. It is modular in design, so as to be able to log everything from CPU usage to email box size.

**Changes:** Data entry from the configuration interface is now tested. Some bug were fixed in the UPS module, and code cleanup continues.

## **Bacula 1.38.7**

by [Lev Arris](#) - Fri, Apr 7th 2006 10:34 PDT

**About:** Bacula is a set of programs that allow you to manage the backup, recovery, and verification of computer data across a network of different computers. It is based on a client/server architecture and is efficient and relatively easy to use, while offering many advanced storage management features that make it easy to find and recover lost or damaged files.

**Changes:** This release removes the timed wait for VSS on Windows 2003, as it is not yet implemented. It corrects the bacula.in script to reference bacula-ctl-xx in the sysconfig directory rather than the bin directory.

## **Brutus 0.9.24**

by [Jules Colding](#) - Fri, Apr 7th 2006 06:02 PDT

**About:** Brutus is an Exchange connector and

development framework that offers access to all of MAPI and therefore to all versions of Microsoft Exchange from version 5.5 onwards. It is a complete wrapping of all of MAPI into a (large) set of CORBA interfaces. It enables any groupware client to integrate seamlessly into any organization with large Exchange deployments on an equal footing with MS Outlook. Being based on CORBA, it is platform independent, and works equally well on Linux, the BSDs, Windows, or wherever there is a CORBA implementation available.

**Changes:** The Evolution plugin is now feature complete with regard to the mail component. Evolution 2.4 RPMs for Fedora Core 4 and Evolution 2.6 RPMs for Fedora Core 5 are now available. The calendar component is now receiving all of the developers' attention.

## **Run Time Access 0.7.5**

by [Bob Smith](#) - Fri, Apr 7th 2006 06:00 PDT

**About:** RTA (Run Time Access) gives easy runtime access to your program's internal structures, arrays, and linked-lists as tables in a database. It makes it easy to separate your UI programs from your daemon programs.

This separation make building and testing both UI and daemon easier. When using RTA, your UI programs think they are talking to a PostgreSQL database. The PostgreSQL bindings for C and PHP work, as does the PostgreSQL command line tool, psql.

**Changes:** This release cleans the YACC grammar, fixes minor bugs, and removes support for FUSE.

## **Test-Parser 1.1**

by [Bryce Harrington](#) - Fri, Apr 7th 2006 05:59 PDT

**About:** Test::Parser is a collection of parsers for different test output file formats. These parse the data into a general purpose data structure that can then be used to create reports, do post-processing analysis, etc. It can also export tests in SpikeSource's TRPI test description XML language.

**Changes:** This release improves the LTP parser and adds a parse\_ltp script that prints a tabular summary of the PASS/FAILs of test cases.

## **ad-tolk 0.1**

by [Polychronis Ypodimatopoulf\[.\]](#) - Fri, Apr 7th 2006 05:59 PDT

**About:** ad-tolk enables Wi-Fi enabled machines that are within range of each other to automatically setup their wireless interfaces by calculating IP addresses based on their MAC addresses (in the range 10.0.0.0/8) and joining an ad-hoc cell called "livefolio". Afterwards, all nodes can discover their neighbors and start exchanging text messages without any manual network configuration.

## nwcc 0.6

by [Nils Weller](#) - Fri, Apr 7th 2006 05:58 PDT

**About:** nwcc is a small C compiler for Unix systems. It can generate NASM 80x86 code for Linux/FreeBSD/OpenBSD and MIPS code for IRIX. It doesn't feature any software development support beyond plain compilation.

**Changes:** This release adds support for the MIPS architecture. It currently only works with IRIX, and only generates n32 ABI-compatible code (which means that a 64bit processor is required). The changes appear to have improved robustness slightly on x86, as well.

## C3-Lock Lite 1.01

by [Create3](#) - Fri, Apr 7th 2006 05:56 PDT

**About:** C3-Lock Lite is a highly sophisticated password protection and user management system capable of serving access to protected areas to thousands of users at the same time. It offers very high levels of security and is very easy to install and maintain. It comes with an admin interface where Webmasters and administrators can create new user accounts, new user groups, activate/inactivate groups or individual accounts, set user level, view user logs, etc. It was designed as module using the HTML::Template Framework that can be integrated into or used as a foundation with any Web-based application that meets the requirements.

**Changes:** This release adds example pages for Security Level and Groups.

## **Pulga 1.1.3**

by [Guilherme Silveira](#) - Fri, Apr 7th 2006 05:55 PDT

**About:** Pulga is a program for numerical simulation of dynamical systems. It is designed to provide a way for students and researchers who study dynamical systems to model them on a computer and analyze them numerically without the difficulty of traditional computer programming languages.

**Changes:** This release adds a new Euler Plugin capable of numerically solving Ordinary Differential Equations using the first order Eulers Method. It allows the creation of any kind of intermediate variable. A few bugs have been fixed, and the release is backwards-compatible.

## **Garidio 1.0beta**

by [Daniel Lofquist](#) - Fri, Apr 7th 2006 03:38 PDT

**About:** Garidio is an application that allows users on a network to share the contents of their desktop clipboards with each other. It has been successfully tested on Mac OS X (Tiger), Windows XP (SP2), and Linux (Slackware, SuSE, and Ubuntu), but it should work fine on any system with a working JVM for Java 1.5.
